BUILDING CODE REVIEW:

1.0 general

.1 introduction:

.1 The purpose of this review is to identify the ontario building code requirements and summarize our approach with regard to fire and life safety applicable for the construction of the proposed north bay shop expansion.

.2 This document is based on the requirements of the 1997 ontario building code, ontario regulation 403/97 (obc). [ ] indicates ontario building code, ontario regulation 403/97 article reference.

.2 description:

.1 The scope of this project involves the multi phase construction of new paint shops. The building additions shall be of non-combustible construction and will be sprinklered.

.2 The industrial facility will be organized to accommodate the following programmatic spaces:

.1 paint shops
.2 mechanical / electrical support spaces

.3 Parts 3, 4, 5 and 6 of the o.b.c. will apply to the proposed addition and renovations. part 11, as required, will apply to the design and construction / renovation of portions of the existing building(s). [2.1.1.6.(1)]

.4 Where an existing building system is materially altered or repaired, the performance level of the building after the material alteration or repair shall be at least equal to the performance level prior to the alteration or repair. [11.3.1.1]

.5 Except as provided for in articles 11.3.1.1 and 11.5 the design and construction of portions of a building system or building that are extended shall comply with all other parts of the code. [11.3.1.2, 11.3.2.1]

.6 The performance level of the building after construction will not be less than the performance level of the building prior to construction in conformance with part 11 of the o.b.c. [11.4.1.1]

.7 With the proposed addition the occupant load increases by more than 15%, thus the performance level of the building is reduced [11.4.2.2(1)]

.8 Upgrade early warning systems and evacuation systems as follows [11.4.3.3, table 11.4.3.3];

evaluate access to exits width based on new occupant load as per 3.3.1 (based on the occupant load –(85 x .25" = 21.25"), adequate widths have been provided.)

evaluate exist widths based on occupant load and 3.4.3 (based on the occupant load –(85 x .31.87" = 21.25"), adequate widths have been provided.

install exit signs as per 3.4.5, install lighting in exits and access to exist as per 3.2.7 (provide new exit signage and emergency lighting to suit layout and additional exit doors)

fire alarm system shall meet 3.2.4 (building shall contain a single stage fire alarm system (3.2.4.3) designed to notify the fire department(3.2.4.7) complete with an annunciator panel (3.2.4.8).)

travel distance and number of exits shall conform to all other parts of the code (add additional exits doors to conform with 82' (25m) travel distance requirements. add corridor to provide access to exit at exist. lunchroom. – refer also to other section of this code review)

install door release hardware in accordance with 3.3.1.12 and 3.4.6.15 (every exit door from the f–1 occupancy shall be equipped with panic hardware. (3.4.6.152c).)

2.0 occupancy classification

2.1 existing building (paint shop):

.1 major occupancies:	spray painting operations – high hazard industrial occupancy (group f–1) offices – (group d)
.2 building areas:	9,508 sq. ft. (883.3 m2)
.3 building height:	one (1) storey
.4 gross floor area of buildings:	10,201sq. ft. (947.7 m2)
.5 streets facing:	two (2)
.6 1997 obc classification:	group f, division 1, up to 2 storeys, [3.2.2.65] maximum area is 25,800sq.ft. for 1 storey
.7 construction required:	non combustible, sprinklered
.1 floors:	0hr fire separation
.2 mezzanines	~
.3 roof:	~
.4 sprinklers:	required

.5 All loadbearing walls, columns and arches supporting an assembly required to have a fire–resistance rating shall have a fire–resistance rating of 45min. or be of non combustible construction
.6 Mezzanine is not considered a storey when utilized as a service space. [3.2.1.1(7)]
.7 Facility faces two streets. [3.2.2.10]

2.2 proposed one (1) storey addition and renovations to existing building(s):

.1 major occupancy:	spray painting operations – high hazard industrial occupancy (group f–1) offices – (group d)
.2 building area:	maximum area (1 storey) 38,000sf (proposed area 27,194sf)
.3 building height:	one(1) storeys
.4 gross floor area of building including mezzanines:	27,887sf
.5 streets facing:	two (2)
.6 1997 obc classification:	assembly buildings, group f, division 1, up to 3 storeys, sprinklered [3.2.2.64]

3.0 height and area requirements

3.1 construction required:	non–combustible, sprinklered
.1 floors:	shall be fire separations – 45 minute fire–resistance rating
.2 mezzanines:	~
.3 roof:	~
.4 sprinklers:	required

3.2 All loadbearing walls columns and arches supporting an assembly required to have a fire–resistance rating not less than that required for the supported assembly [3.2.2.64]

4.0 spatial separation

4.1 The existing / proposed development will generally be constructed to within 2'–6" (750 mm) of the property line on the east and within 3'–6" (1050 mm) of the property line on the west side of the building.

Based on the limiting distances, the % of unprotected openings permitted in the exposing building faces are as follows: [table 3.2.3.1D]

exposing building face		area	limiting distance (mm)%	unprotected openings
north elevation		1742sf (161.8m2)	>15000mm	100%
south elevation	F–1	3060sf (284.0m2)	2400mm	21%
east elevation		3060sf (284.0m2)	>15000	21%
west elevation	F–1	2760sf (256.4m2)	>15000mm	100%
west elevation	D	600sf (55m2)	13700mm	100%

4.2 Exposing building face with % unprotected opening of 25% must be constructed of non combustible construction with a 2hr fire resistance rating and have non combustible cladding[3.2.3.7(5)(4)]

4.3 Exposing building face with % unprotected opening of 25% to 100% must be constructed of non combustible construction with a 1hr fir resistance rating and have non combustible cladding. [3.2.3.7(5)(4)]

4.4 Exist doors from adjacent fire compartment within 3m (9.8') with required closures. [3.2.3.12(3)(4)]

5.0 provisions for firefighting

5.1 Facility faces ONE street. [3.2.2.10]

5.2 An access route for fire department vehicles will be provided to the principal entrance of the building. [3.2.5.5]

5.3 A fire alarm system will be provided in the building. [3.2.4.1.(2).(j)] The fire alarm system will have the following characteristics;

* a single stage system [3.2.4.3(1a)]
  * upon the operation of a manual pull station or fire detector and alarm signal shall sound on all signal devices in the system [3.2.4.4(1)]
  * system shall be installed in conformance with CAN/ULC–S524–M – Standard for the Installation of Fire Alarm Systems
  * system shall be tested in conformance with CAN/ULC–S537–M – Standard for the Verification of Fire Alarm Systems
* system shall be designed to send a signal to the fire department [3.2.4.7(1)]
  * an automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated. [3.2.4.7(2)]
* an annunciator panel will be located in the in the main entrance vestibule [3.2.4.8(1)]
* system will comply with all o.b.c., u.l.c., c.s.a., and ontario fire marshal requirements

The existing building does not have a fire alarm system. In accordance with part 11 required upgrades a new fire alarm system will be installed within the existing building.

5.4 Smoke detectors shall be installed in exit stair shafts. [3.2.4.11(e)]

5.5 Automatic sprinkler system shall be equipped with waterflow detecting devices.[3.2.4.16]

5.6 Manual pull station shall be installed near principal entrance, at every required exit. [3.2.4.17]

5.7 a standpipe and hose system is not required to be installed in the building. [table 3.2.9.1]

5.8 Access routes shall be located so that the principal entrance is located not less than 3m and not more than 15m from an access route.[3.2.5.5]

5.9 Adequate water supply for fire fighting shall be provided for every building. [3.2.5.7(1)]

5.10 Hydrants shall be located within 90m (295'–3") from any portion of the building perimeter required to face a street.[3.2.5.7(2)]

5.11 Fire department connection for an automatic sprinkler system shall be located so that the distance from the fire department connection to the fire hydrant is not more than 45m (147'–8" and is unobstructed. [3.2.5.16(2)] A new fire hydrant is required to comply with this requirement.

5.12 Automatic sprinkler system shall conform with NFPA 13 – Standard for the Installation of Sprinkler Systems.

5.13 A standpipe system is not required because the building is sprinklered. [3.2.9.1(1c)]

6.0 requirements for mezzanines and openings through floor assemblies

6.1 Mezzanine is not considered a storey when utilized as a service space. [3.2.1.1(7)]

7.0 safety requirements within floor areas

7.1 The storage, use and handling of hazardous materials shall be in conformance with the Ontario Fire Code and / or the National Fire Code. [3.3.1.2]

7.2 Two (2) egress doorways shall be provided from every room in an F–1 occupancy where the room is greater than 15m2 (161sf). [3.3.1.5(1)]

7.3 The minimum unobstructed width of corridors will be 3 ft. 7 in. (1100 mm.) for every corridor used by the public. [3.3.1.9.(2).(a) & (b)]

7.4 A dead end corridor is permitted in high hazard occupancy where there is a second and separate egress doorway from each room or suite not leading into a dead end corridor. [3.3.1.9.(14)]

7.5 Every door that opens into a corridor or other facility providing access to exit from a room shall swing on a vertical axis and in the direction of travel to the exit where the room is used or intended for an occupant load of more than 60 persons or is in a high hazard occupancy [3.3.1.10.(2).(a)]

7.6 Capacity of access to exits shall be based on the occupant load of the portion of the floor area served. Access to exist width shall be 6.1mm per person (89 x 6.1mm=543mm) for slopes less than 1 in 8 and 9.2mm per person (89x9.1mm=819mm) for slopes more than 1 in 8.

7.7 An exhaust system designed in conformance with part 6 shall be provided in a building in which dust, fumes, gases or vapours have the potential to create a fire or explosion hazard. [3.3.1.19(1)] Explosion relief devices or protective measures shall be provided where explosion hazard is present. [3.3.1.19(2)]

8.0 requirements for exits

8.1 The building has been designed to accommodate approximately 89 persons.

The occupant load for the building has been calculated on the basis of table 3.1.16 for type of occupancy as well as staffing levels requirements defined by the client.

The 'r' suffix at the occupant load indicates that the space will have a restricted occupancy due to operational or other limitations. These limitations are noted in the remarks column. permanent signs indicating the restricted occupant loads will be posted in conspicuous locations.

occupant load calculation

area or room	net floor area (sq.ft.)	area perperson (sq.ft.)	occupantload	remarks
existing building				
paint shops	4,800			10.0
assumed load				
office	360	100		3.6
lunch room	348	11.8		29.0
storage	1100	495		2.0
			subtotal	45.0
building addition				
paint shops	3,000			18.0
			subtotal	18.0
		total occupant load	63.0	

8.3 The proposed building will be served by not less than two (2) exits [3.4.2.1.(1)]. Such exits will be located so that the travel distance to not less than one exit described in article 3.4.2.4 will be not more than 82'–0". (25 m) for high hazard occupancies [3.4.2.5.(1).(a)]

8.4 Exit signage will be provided at every exit door in accordance with 3.4.5.1.(1) and, where necessary, signs will be provided to indicate the direction of egress in corridors serving the public. [3.4.5.1.(5)]

8.5 The required width of an exit will not be less than 3 ft. 7 in. (1100 mm) for corridors and passageways. [3.4.3.1.(2)(a)]

8.6 The required width of an exit will not be less than 2 ft. 7 in. (790 mm) for doorways. [3.4.3.1.(2).(e)]

9.0 fire separation requirements

9.1 Facility contains group F–1 and group D major occupancies. Group F–1 and D major occupancies shall be separated with a fire separation with a 3hr fire resistance rating. [table 3.1.3.1]

9.2 in addition to the requirements to provide a fire separation between major occupancies, the rooms, suites and spaces noted below will be fire separated from the remainder of the building as indicated:

.1 corridor serving the public	45 minutes [3.3.1.4.(2)]
.2 exit stair	45 minutes [3.4.4.1.(1)]
.3 janitor's room	0 hour [3.3.1.20.(3)]
.4 mechanical rooms (service rooms) with fuel–fired appliances	2 hours [3.6.2.1(1a)]
.5 electrical rooms	not required

10.0 openings in fire separation

10.1 Doors installed as closures in required fire separations shall be installed in accordance with the requirements of 3.1.8.5 and table 3.1.8.4.

11.0 fire stopping

11.1 Piping, tubing, ducts, optical fibre cables, electrical wires and cables, electrical outlet boxes and other similar building services that penetrate a membrane forming part of an assembly required to have a fire–resistance rating, or a fire separation shall be:
.1 tightly fitted, or
.2 sealed by a fire stop system that, when subjected to the fire test method in CAN4–S–115–M, "Standard Method ofFire Tests of Firestop Systems", has an F rating not less than the fire protection rating required for the closures in the fire separation. [3.1.9.1]

12.0service spaces

12.1 not applicable.

13.0 health requirements

13.1 The calculated occupant load for the building is in the order of 63 persons. For the purposes of calculating the number of plumbing fixtures required it has been assumed that the male female split is 80 / 9 persons respectively. The building will be provided with plumbing fixtures on the following basis:

.1 men's washrooms	req'd.	provided	
.1 water closets / urinals:	4	5	[3.7.4.9.(1)]
.2 lavatories:	4	exist. wash basin	

.2 Phase 2 addition will provide additional washrooms for women and change room.

14.0 emergency lighting

14.1 emergency lighting shall be provided to an average level of illumination not less than 10 lx at floor level in:
.1 exits
.2 corridors used by the public
.3 floor areas where the public may congregate [3.2.7.3.(1)]

14.2 emergency lighting shall be provided with an emergency power supply designed and installed that upon failure of the regular power it will assume the electrical load automatically for a period of 30 minutes. [3.2.7.4.(1).(b)]

15.0 barrier–free design

15.1 This section is not applicable to F–1 occupancies.

15.2 For group D occupancies (future offices), at least one (1) entrance intended for general use by the public or the occupants complying with the requirements of 3.8.3.3 for barrier–free accessibility shall be provided for the building. [3.8.1.2]

15.3 At least one (1) principle entrance as described in 3.8.1.2 shall be equipped with a power door operator. [3.7.3.3.(5)]

15.4 Water closet stalls or special washrooms, as required, shall conform to 3.8.3.8 and 3.8.3.11.

MATERIALS LEGEND:

BRICK VENEER (plan)	finish wood
concrete block	wood blocking
concrete solid block, filled solid or 75% solid	gypsum board
concrete	crushed stone
earth/BEDROCK	thermal batt ins. to r rating noted in assemblies
poured concrete (SECTION)	semi–rigid insulation
structural steel @ small scale	rigid insulation

MODULAR CO–ORDINATION NOTES:

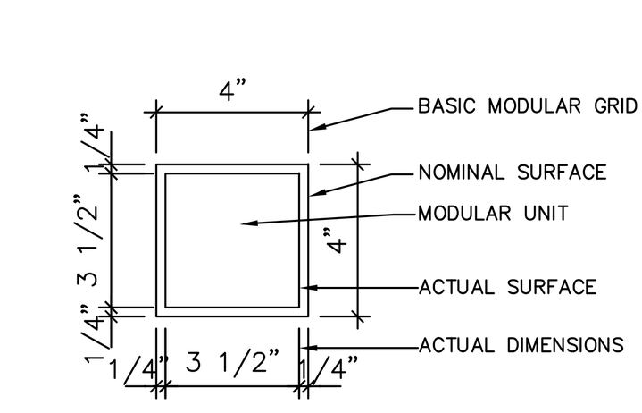
ALL WORKING DRAWING ARE DIMENSIONED BY THE MODULAR COORDINATION METHOD IN CONFORMANCE WITH THE SERIES OF STANDARDS FOR METRIC DIMENSIONAL COORDINATION IN BUILDING CAN3–A31, M–75.

THE POSITION AND SIZE OF BUILDING COMPONENTS IN THIS DRAWING ARE CONTROL BY THE BASIC MODULAR GRID OF 4".

grid lines or points on grid lines are located on the dimension line by an arrowhead

SMALL SCALE ASSEMBLY DRAWING IN PLAN, elevation, or section show diminution to grid lines or to nominal surface of an off–grid component or to center line of construction assembly.

large scale detail drawing show dimensions from grid lines to actual surface of a component.



IMPERIAL

GENERAL NOTES:

1. THIS DRAWING TO BE READ IN CONJUNCTION WITH ARCHITECTURAL, STRUCTURAL, MECHANICAL, AND ELECTRICAL DRAWINGS LISTED.
2. ANY DISCREPANCIES, OMISSIONS OR CONFLICTS SHALL BE REPORTED TO THE ARCHITECT PRIOR TO WORK PROCEEDING.
3. ALL CONTRACTORS SHALL COMPLY WITH PART 3 OF THE ONTARIO BUILDING CODE (1997) ACT, MUNICIPAL BYLAWS. ENVIRONMENTAL LAWS AND ALL OTHER GOVERNING AUTHORITIES HAVING JURISDICTION.
4. Prior to partition layout, site verify all foreseeable interferences and report to architect.
5. Provide adequate blocking in walls and ceilings where apparent loading is present (ie. millwork or other wall/ceiling hung ITEMS)
6. All partition walls unless noted otherwise or detailed shall extend to the underside of structure.

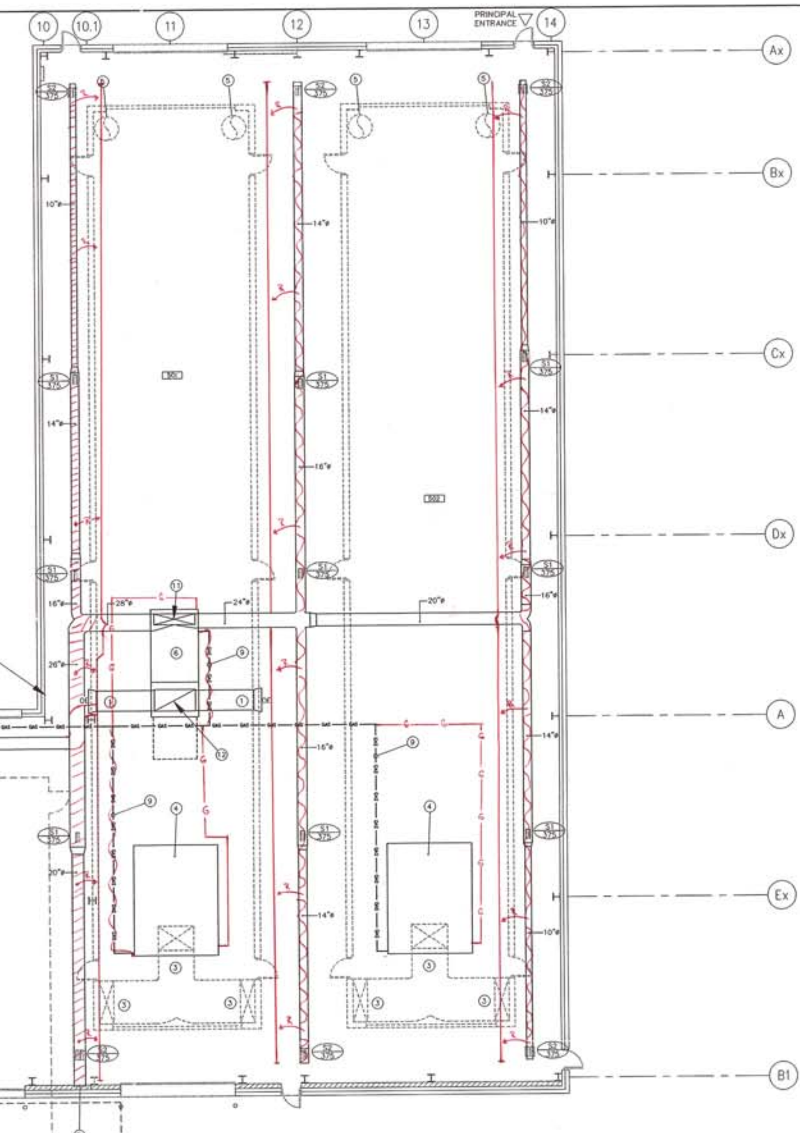
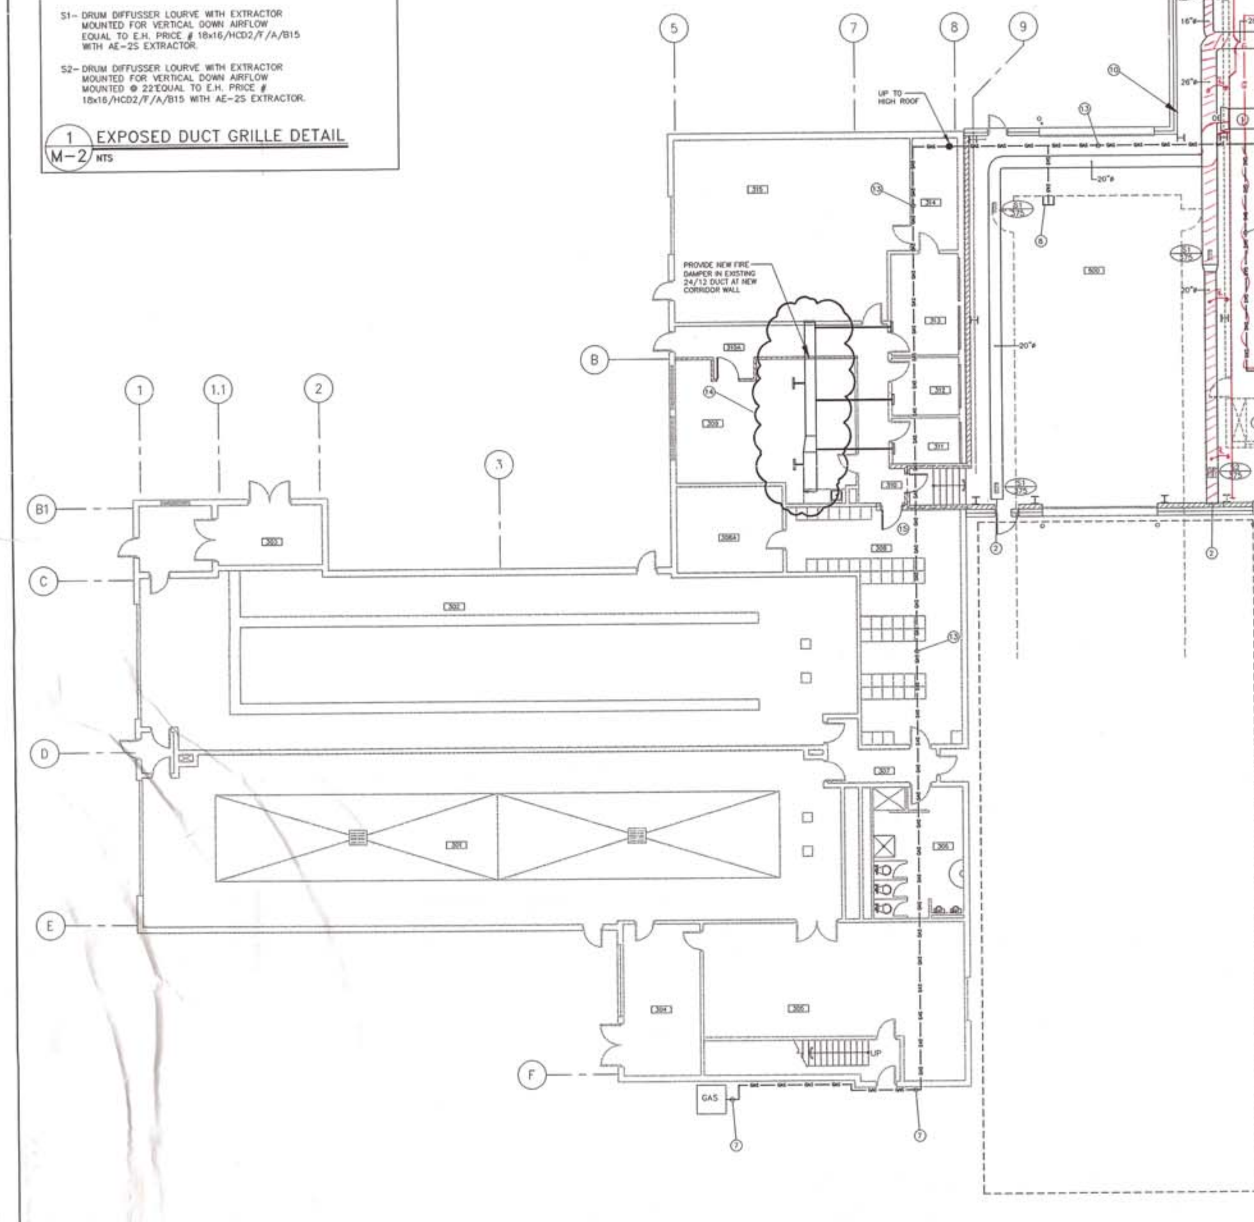
NTS

HEATING & VENTILATION NOTES:

1. 48"w x 26"h OPEN END RETURN AIR DUCT.
2. 20"ø DUCT FOR FUTURE EXTENSION.
3. SUPPLY DUCT FROM MAKE UP AIR UNIT TO PAINT BOOTH BY PAINT BOOTH SUPPLIER.
4. DIRECT FIRED MAKE UP AIR SUPPLY UNIT ON ROOF BY PAINT BOOTH SUPPLIER. COORDINATE INSTALLATION OF ROOF CURB (SENT TO SITE EARLY BY BOOTH SUPPLIER)
5. EXHAUST DUCT TO ROOF MOUNTED EXHAUST FANS BY PAINT BOOTH SUPPLIER. COORDINATE INSTALLATION OF ROOF CURB (SENT TO SITE EARLY BY BOOTH SUPPLIER)
6. ROOF MOUNTED HEATING & VENTILATION UNIT BY DIV. 15 SEE SPECIFICATIONS THIS DRAWING.
7. EXTEND NEW 3"ø – 5psi GAS LINE ALONG EDGE OF BUILDING AND OFFSET UP TO LOW ROOF AREA. SEE DETAIL 2/M-2 FOR METER UPGRADE
8. 2"ø CAPPED 5psi GAS LINE FOR FUTURE.
9. 2"ø GAS LINE TO ROOF MOUNTED EQUIPMENT SEE DETAIL 2/M-2, 6/M-2
10. REMOTE CONTROL PANEL FOR H & V UNIT.
11. 66"x18" SUPPLY AIR DUCT DOWN FROM H & V UNIT ON ROOF.
12. 60"x24" RETURN AIR DUCT UP TO H & V UNIT.
13. NATURAL GAS PIPING ON ROOF WITH SUPPORTS. SEE DETAIL # 3 THIS DRAWING. PAINTING OF PIPING TO GAS CODE REQUIREMENTS BY DIV. 15.
14. EXISTING HVAC SYSTEMS THIS AREA TO REMAIN. REMOVE – REINSTALL AND COORDINATE WITH NEW CEILING SYSTEMS – SEE ARCHITECTURAL DRAWINGS.
15. EXTEND 6"ø EXHAUST DUCT FOR RELOCATED LOCKERS TO EXISTING LOCKER EXHAUST SYSTEM.

NOTE: ALL SUPPLY AIR DUCT WORK TO BE INSTALLED IN OPEN WEB STEEL JOISTS. ALL RETURN AIR DUCT WORK TO BE INSTALLED TIGHT TO U/S OF OWS–J.





ROOF MOUNTED HEATING & VENTILATION UNIT

THE HEATER SHALL BE AN INDUSTRIAL QUALITY ROOF MOUNTED INDIRECT FIRED UNIT, CSA/CGA APPROVED, EQUAL TO QUIET-AIRE MODEL "QAI-1000-4". THE HEATER SHALL BE DESIGNED FOR OUTDOOR HORIZONTAL MOUNTING, ASSEMBLED, WIRED AND FLAME-TESTED BEFORE SHIPMENT, BUILT TO THE FOLLOWING SPECIFICATIONS AND WITH THE FOLLOWING FEATURES:

SPECIFICATIONS:

AIRFLOW RATE 10000 SCFM
EXTERNAL STATIC PRESSURE 1" W.C.
SUPPLY FAN MOTOR SIZE 10 HP
EXHAUST FAN MOTOR SIZE 1/2 HP
HEATING INPUT 1,250,000 BTU/HR
HEATING OUTPUT 1,000,000 BTU/HR
TEMPERATURE RISE (T) 100ø F
POWER SUPPLY 480V/3/60CY
NATURAL GAS SUPPLY 5 psi

FEATURES: THE UNIT(S) SHALL BE FACTORY ASSEMBLED AND SHIPPED IN ONE OR MORE SECTIONS TO FACILITATE SHIPPING AND INSTALLATION REQUIREMENTS.

UNIT CASING:

THE UNIT CASING AND ACCESSORIES SHALL BE HEAVY GAUGE G-90 GALVANIZED STEEL WITH BAKED ENAMEL FINISH. THE UNIT CASING SHALL BE AIRTIGHT AND WEATHERPROOF. ALL STRUCTURAL FRAMING TO BE HOT ROLLED STEEL PRIME PAINTED. FRESH AIR DAMPERS CONSTRUCTED OF 16 GAUGE GALVANIZED STEEL BLADES AND FRAMING WITH NYLON BEARINGS SHALL BE FURNISHED. MOTORIZED DAMPER OPERATION WITH SPRING RETURN ACTION SHALL BE FURNISHED. FILTER RAILS ARRANGED IN A "V" CONFIGURATION FURNISHED WITH 2" REPLACEABLE TYPE FILTER SHALL BE SUPPLIED. A G-90 GALVANIZED STEEL INLET HOOD WITH RAIN SHIELD SHALL BE FURNISHED ON THE FRESH AIR INLET. CASING SHALL BE INSULATED WITH 2" - 3UL NON-WICKING INSULATION, LINED WITH 20 GAUGE GALVANNEAL, TO ELIMINATE AIR BORNE FIBERS FROM ENTERING THE AIR STREAM. INSULATED DOUBLE WALLED HINGED ACCESS DOORS SHALL BE PROVIDED TO PERMIT READY ACCESS TO ALL INTERNAL COMPONENTS.
CASING SHALL BE FURNISHED WITH A REAR TUBE ACCESS PANEL, C/W HANDLES, FOR TUBE MAINTENANCE.

HEAT EXCHANGER

THE HEAT EXCHANGER SHALL BE RATED AT A MINIMUM 80% EFFICIENCY AT RATED OUTPUT. THE FLUE GAS TRAVEL SHALL BE OF FOUR-PASS DESIGN, WITH NO INTERNAL BAFFLES. THE PRIMARY HEAT TRANSFER SURFACE AND HEADERS SHALL BE A MINIMUM OF 16 GA. 409 STAINLESS STEEL UP TO AND INCLUDING INPUTS OF 1250CFH, 14 GA. 409 STAINLESS STEEL FOR THE LARGER INPUTS, THE SECONDARY HEAT TRANSFER SURFACE SHALL BE 16 GA. 409 STAINLESS STEEL. THERE SHALL BE THREE (3) COLLECTOR BOXES FABRICATED FROM16/14 GA. 409 STAINLESS STEEL. THE HEAT EXCHANGER SHALL BE SUPPLIED WITH A REAR TUBE ACCESS PANEL COMPLETE WITH BRASS NUTS FOR EASY REMOVAL TO ALLOW INSPECTION AND SERVICING. THE HEAT EXCHANGER DESIGN SHALL PERMIT UNRESTRICTED LATERAL AND PERIPHERAL EXPANSION DURING THE HEATING AND COOLING CYCLE. THE HEATING SURFACE AREA OF THE PRIMARY AND SECONDARY HEAT TRANSFER SURFACE AREA SHALL BE 60 FT2 AND 58 FT2 RESPECTIVELY.
THE SURFACE TEMPERATURE OF THE HEAT EXCHANGER SHALL NOT EXCEED 75% OF ITS SCALING TEMPERATURE WHEN OPERATING AT RATED CAPACITY.

FAN SECTION

THE UNIT SHALL BE SUPPLIED WITH AMCA RATED, FORWARD CURVED, DOUBLE WIDTH, DOUBLE INLET, STATICALLY AND DYNAMICALLY BALANCED CENTRIFUGAL FANS. THE FAN ASSEMBLY SHALL BE LOCATED UPSTREAM OF THE HEAT EXCHANGER. FANS ARE TO BE MOUNTED ON A HEAVY DUTY, TURNED AND GROUND STEEL SHAFT WITH ITS MAXIMUM OPERATING SPEED NOT EXCEEDING 75% OF ITS FIRST CRITICAL SPEED. THE BEARINGS ARE TO BE OF THE PRE-LUBRICATED, SELF-ALIGNING TYPE WITH LOCKING COLLARS AND EXTENDED GREASE TUBING WITH ALEMITE FITTINGS. THE "V" BELT DRIVE SHALL BE SIZED WITH A CAPACITY 25% GREATER THAN THE MOTOR HORSEPOWER AND HAVE A MINIMUM OF TWO BELTS. UP TO 7.5 HP THE MOTOR SHEAVE SHALL BE OF THE ADJUSTABLE PITCH TYPE. HINGED ACCESS PANELS SHALL BE PROVIDED TO ALLOW INSPECTION AND MAINTENANCE OF THE FAN AND DRIVE ASSEMBLY AND FOR REMOVAL OF THE COMPLETE ASSEMBLY. MOTORS SHALL BE RATED FOR FAN DUTY, TEFC, T-FRAME AND 575 VOLT 60 CYCLE 3 PHASE. THE FAN MOTOR SHALL BE MOUNTED ON AN ADJUSTABLE BASE AND PRE-WIRED IN CONDUIT TO THE CONTROL PANEL.

INDUCED DRAFT FAN

AN INTEGRALLY MOUNTED, HEAVY DUTY, RADIAL BLADE INDUCED DRAFT FAN SHALL BE PROVIDED. THE INDUCED DRAFT FAN SHALL BE EQUIPPED WITH A PROPER MANUAL DAMPER COMPLETE WITH LOCKING QUADRANT TO ENSURE PROPER DRAFT, RATED EFFICIENCY AND EXTENDED HEAT EXCHANGER PERFORMANCE. NO CENTRIFUGAL WHEELS SHALL BE USED. THE INDUCED DRAFT FAN SHALL BE EQUIPPED WITH A PROPERLY SIZED FULL VOLTAGE THREE PHASE MOTOR FOR RELIABLE OPERATION.

GAS FIRED BURNER

GAS BURNER SHALL BE OF THE LOW PRESSURE POWER TYPE, WITH INTEGRAL COMBUSTION AIR BLOWER AND MOTOR, COMBUSTION AIR PROVING DIFFERENTIAL SWITCH AND REMOVABLE PILOT ASSEMBLY. THE COMBUSTION AIR DAMPERS SHALL BE INTERLOCKED WITH A PROPERLY SIZED GAS CONTROL VALVE TO ENSURE "ON RATIO" FIRING. AN ELECTRONIC PROGRAMMING RELAY WITH FLAME ROD SHALL BE USED FOR FLAME SUPERVISION. THE PRE-WIRED AND PRE-PIPED VALVE TRAIN SHALL BE MOUNTED ON THE HEATER AND COME COMPLETE WITH APPLIANCE GAS PRESSURE REGULATOR; AUTOMATIC SHUT-OFF VALVE; FIRING COCK; MANUAL PILOT SHUT-OF COCK; PILOT GAS PRESSURE REGULATOR; AUTOMATIC PILOT VALVE; AND AN ADJUSTABLE ORIFICE/SHUT-OFF COCK. A LUBRICATED PLUG COCK SHALL BE PROVIDED FOR FIELD MOUNTING AT THE UNIT. THE BURNER SHALL FIRE NATURAL GAS AND BE ARRANGED FOR FULL MODULATING, WITH LOW FIRE START.

ELECTRICAL CONTROLS

AN NEMA 1 CONTROL PANEL COMPLETE WITH HINGED ACCESS DOOR AND DEADFRONT DISCONNECT SWITCH SHALL BE MOUNTED ON THE UNIT AND WIRED. ALL CONTROL COMPONENTS ARE TO BE LABELED AND INDIVIDUALLY WIRED TO A NUMBERED DIN-RAIL MOUNTED TERMINAL STRIP TO AID IN SERVICING. POINT TO POINT WIRING IS NOT ACCEPTABLE. ALL WIRING SHALL BE COLOUR CODED AND NUMBER TAGGED AT EACH END TO MATCH THE CONTROL DIAGRAM SUPPLIED. ALL CONTROL PANEL WIRING TO RUN IN PLASTIC RACEWAY. WIRING FROM PANEL TO COMPONENTS MUST BE RUN IN FLEXIBLE CONDUIT AND FOR LONGER RUNS IN EMT AND FLEXIBLE CONDUIT. FULL OPERATING AND MAINTENANCE INSTRUCTIONS SHALL ACCOMPANY EACH UNIT.
THE CONTROL SYSTEM SHALL INCLUDE BUT NOT BE LIMITED TO THE FOLLOWING COMPONENTS REQUIRED FOR AUTOMATIC OPERATION:

- MAIN DISCONNECT SWITCH
- CONTROL CIRCUIT TRANSFORMER
- FAN MOTOR STARTER C/W OVERLOADS
- SUB CIRCUIT FUSES
- CONTROL CIRCUIT FUSES
- CONTROL RELAYS
- ELECTRONIC FLAME RELAY COMPLETE WITH ALARM CONTACTS
- INDUCED DRAFT FAN AIR PROVING DIFFERENTIAL SWITCH
- HIGH LIMIT SWITCH
- AUTOMATIC/MANUAL FAN SWITCH
- HEAVY DUTY IGNITION TRANSFORMER
- FAN AND BURNER SERVICE SWITCHES
- REMOTE CONTROL PANEL

OPTIONAL ACCESSORIES INCLUDED:

- OUTDOOR/WEATHERPROOF ENCLOSURES
- INLET HOOD(S) WITH BIRD SCREEN
- V-BANK FILTER BOX WITH THROWAWAY 30% PLEATED FILTERS
- 2-POSITION MOTORIZED INLET DAMPER
- FULL MOD BURNER WITH 15:1 TURNDOWN RATIO
- CRI APPROVALS
- EXTENDED GREASE LINES PIPED TO OUTSIDE OF CASING
- NEMA 12 REMOTE CONTROL STATION COMPLETE WITH "FAN ON/OFF" SWITCH, "BURNER ON/OFF" SWITCH, "FAN ON" LIGHT, "BURNER ON" LIGHT AND DISCHARGE TEMPERATURE CONTROLLER.
- NEMA 12 CONTROL PANEL UPGRADE
- A FRONT MOUNTED, SPRING LOADED, PRESSURE RELIEF DOOR COMPLETE WITH AN OBSERVATION WINDOW TO VIEW THE MAIN FLAME
- "C" STACK 4' ABOVE UNIT
- HIGH GAS PRESSURE REGULATORS
- INTERNAL SPRING ISOLATION
- 24" HIGH MOUNTING CURB

SPRINKLER SYSTEM NOTES

1. REVISIONS TO THE EXISTING SPRINKLER SYSTEMS ARE TO BE DESIGNED AND INSTALLED BY QUALIFIED SPRINKLER SYSTEM CONTRACTORS. THE LAYOUT AND PIPE SIZING INDICATED ON THE DRAWING IS TO BE USED AS A GUIDE ONLY FOR THE QUANTITY AND LOCATION OF HEADS.
2. DESIGN, INSTALL AND TEST ENTIRE SYSTEM IN ACCORDANCE WITH NFPA 13.
3. TESTING TO BE WITNESSED BY AUTHORITY HAVING JURISDICTION.
4. SPRINKLER SYSTEMS FOR THE BUILDING AS FOLLOWS:
   CIRCULATION SPACES – ORDINARY HAZARD
   INSIDE PAINT BOOTHS – EXTRA HAZARD – GROUP 2.
5. THE SPRINKLER SYSTEMS WITHIN THE PAINT BOOTHS WILL BE DESIGNED, INTSALLED AND CERTIFIED BY OTHERS.
   ALLOW FOR A SINGLE POINT 6" ⌀ CONNECTION FOR EACH OF THE TWO PAINT BOOTHS. EXACT DETAIL TO FOLLOW.
6. PROVIDE 6" ⌀ SUPERVISED VALVE AND FLOW SWITCH AT EACH SPRINKLER CONNECTION TO THE PAINT BOOTH.
7. SPRINKLER HEADS – EXPOSED DECK AREAS – UPRIGHT, 57°C RATING.
8. IT IS THE RESPONSIBILITY OF THE SPRINKLER CONTRACTOR TO REMOVE AND REPLACE EXISTING CEILING FINISHES IN THE EXISTING BUILDING AS REQUIRED FOR THE INSTALLATION.
9. WATER SERVICE DATA: AS TESTED BY VIPOND FIRE PROTECTION ON May 24, 2004.
   BUILDING SERVICE LINE: 6" ⌀
   STATIC PRESSURE: 105 psi
   RESIDUAL PRESSURE AT 335 USGPM FLOW RATE: 101 psi
   RESIDUAL PRESSURE AT 815 USGPM FLOW RATE: 96 psi
   RESIDUAL PRESSURE AT 1500 USGPM FLOW RATE: 87 psi
10. A NEW FIRE HYDRANT WILL BE PROVIDED OUTSIDE OF THE PRINCIPAL ENTRANCE FOR FIRE FIGHTING PURPOSES. THIS HYDRANT IS SERVED FROM A SEPARATE WATER LINE. SEE PACKAGE 'A'.
11. IF REQUESTED SUBMIT DESIGN DRAWINGS AND CERTIFICATION TO THE OWNER FOR REVIEW/APPROVAL BY THEIR INSURANCE COMPANY.
    THE INSURANCE COMPANY IS AMERICAN HOME ASSURANCE COMPANY ALL RISKS PROPERTY INSURANCE POLICY # MMAP-1380.

LEGEND

- ENT LIGHT FIXTURE
- MOUNTED LIGHT FIXTURE
- W WALL MOUNTED LIGHT FIXTURE
- HT FIXTURE
- ENCY LIGHT FIXTURE – 1 HEAD
- ENCY LIGHT FIXTURE – 2 HEADS

LIGHT FIXTURE SCHEDULE:

TYPE F1 – GASKETED ENCLOSED SUSPENDED INDUSTRIAL FIXTURE WITH 400W METAL HALIDE LAMP, 277 VOLT BALLAST, TWIST LOCK RECEPTACLE, HOOK, BOX AND LOOP-CORD-POWER HOOK PLUG EQUAL TO GE #LWH3400M-277-HC-MAA-11.

MOUNT TOP OF FIXTURE @ UNDERSIDE OF OPEN WEB STEEL JOISTS.

TYPE F2 – EXTERIOR WALL PACK WITH CUT-OFF SHIELD FOR GLARE CONTROL, 175W METAL HALIDE LAMP AND 277 VOLT BALLAST.
EQUAL TO GE WALL LIGHTER #WZSC17M-277-MGSC3

INSTALL FIXTURES @ 18 FEET ABOVE FINISHED FLOOR

TYPE F2a – IDENTICAL TO TYPE F2 FIXTURES MOUNTED @ 12 FEET ABOVE LOW ROOF AREA

TYPE F3 – INDUSTRIAL FLUORESCENT STRIP LIGHT FIXTURE WITH HIGH EFFICIENCY REFLECTOR, TWO 277V ELECTRONIC BALLASTS, ACRYLIC LENS WIRE GUARD AND SIX T5HO LAMPS. EQUAL TO WILLIAMS # GL-4547SH-WG11-PMSCA1 18-EB3/3-277-CSA

INSTALL FIXTURES ON UNDERSIDE OF OPEN WEB WEB STEEL JOISTS

TYPE F4 – RECESSED 2' x 4' FLUORESCENT FIXTURE FOR T-BAR CEILING WITH FOUR F-032-T8 LAMPS AND ELECTRONIC 277 VOLT BALLAST. EQUAL TO COLUMBIA # XPS-24-432-G-FS-A12.125-4EBB-277.

TYPE F5 – RECESSED 2' x 4' FLUORESCENT FIXTURE FOR T-BAR CEILING WITH THREE F-032-T8 LAMPS AND ELECTRONIC 277 VOLT BALLAST. EQUAL TO COLUMBIA # P2-24-332-G-LD-36-S-3BB-277.

TYPE F6 – RECESSED 1' x 4' FLUORESCENT FIXTURE FOR T-BAR CEILING WITH TWO F-032-T8 LAMPS AND ELECTRONIC 277 VOLT BALLAST. EQUAL TO COLUMBIA # XPS-14-232-G-FS-A12.125-EBB-277.

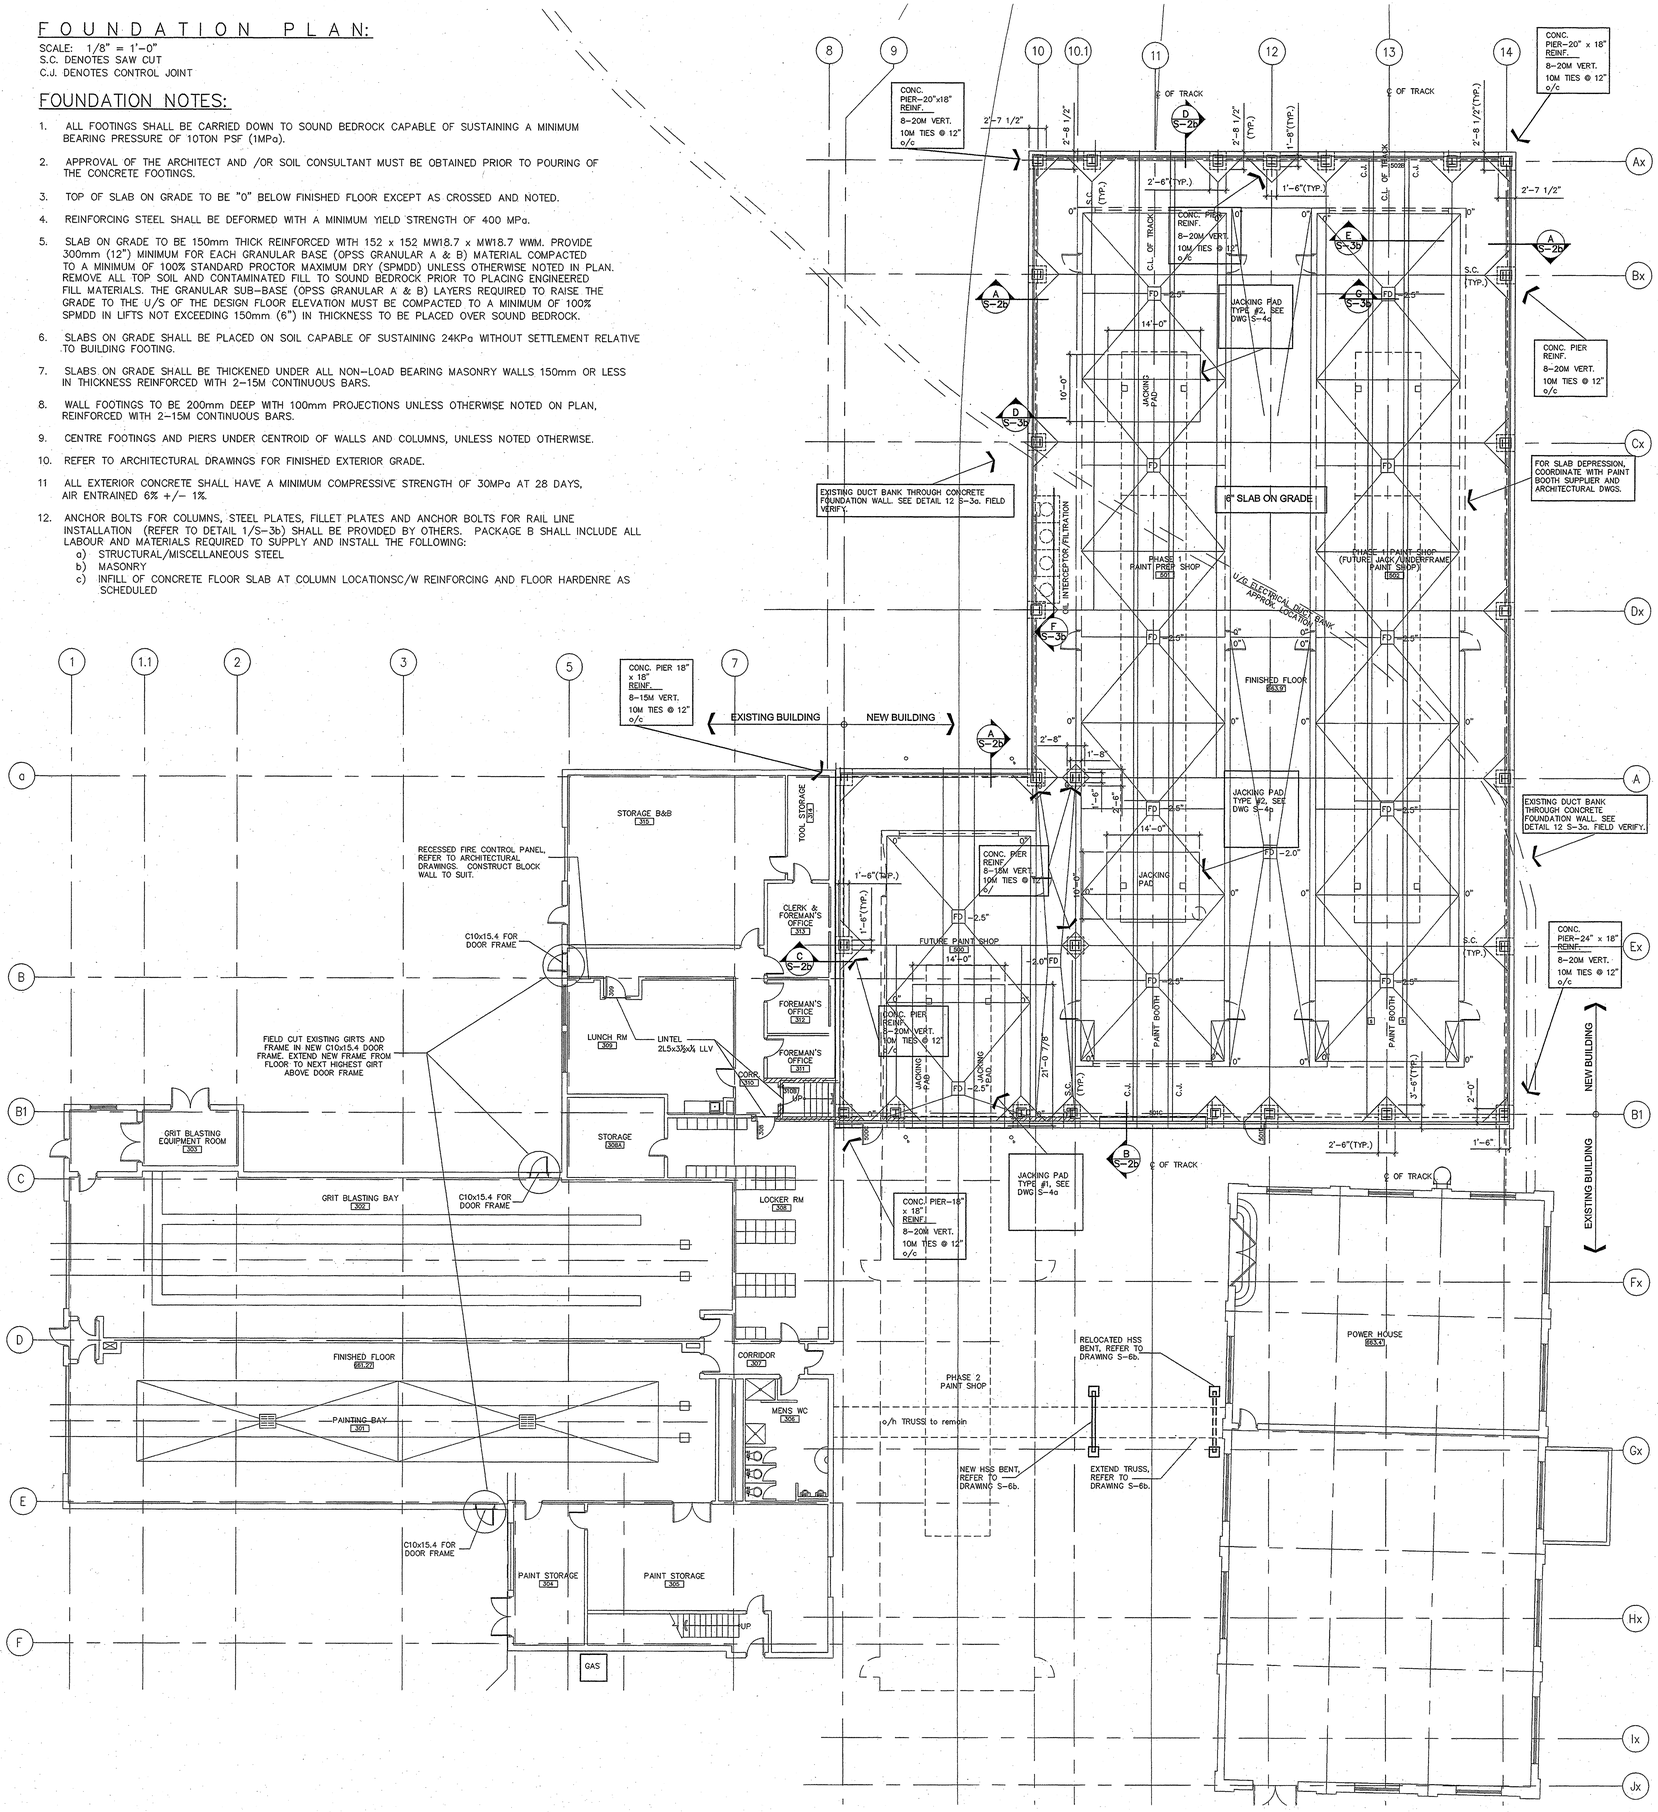
FOUNDATION NOTES:

1. ALL FOOTINGS SHALL BE CARRIED DOWN TO SOUND BEDROCK CAPABLE OF SUSTAINING A MINIMUM BEARING PRESSURE OF 10TON PSF (1MPa).
2. APPROVAL OF THE ARCHITECT AND /OR SOIL CONSULTANT MUST BE OBTAINED PRIOR TO POURING OF THE CONCRETE FOOTINGS.
3. TOP OF SLAB ON GRADE TO BE "0" BELOW FINISHED FLOOR EXCEPT AS CROSSED AND NOTED.
4. REINFORCING STEEL SHALL BE DEFORMED WITH A MINIMUM YIELD STRENGTH OF 400 MPa.
5. SLAB ON GRADE TO BE 150mm THICK REINFORCED WITH 152 x 152 MW18.7 x MW18.7 WWM. PROVIDE 300mm (12") MINIMUM FOR EACH GRANULAR BASE (OPSS GRANULAR A & B) MATERIAL COMPACTED TO A MINIMUM OF 100% STANDARD PROCTOR MAXIMUM DRY (SPMDD) UNLESS OTHERWISE NOTED IN PLAN. REMOVE ALL TOP SOIL AND CONTAMINATED FILL TO SOUND BEDROCK PRIOR TO PLACING ENGINEERED FILL MATERIALS. THE GRANULAR SUB-BASE (OPSS GRANULAR A & B) LAYERS REQUIRED TO RAISE THE GRADE TO THE U/S OF THE DESIGN FLOOR ELEVATION MUST BE COMPACTED TO A MINIMUM OF 100% SPMDD IN LIFTS NOT EXCEEDING 150mm (6") IN THICKNESS TO BE PLACED OVER SOUND BEDROCK.
6. SLABS ON GRADE SHALL BE PLACED ON SOIL CAPABLE OF SUSTAINING 24KPa WITHOUT SETTLEMENT RELATIVE TO BUILDING FOOTING.
7. SLABS ON GRADE SHALL BE THICKENED UNDER ALL NON-LOAD BEARING MASONRY WALLS 150mm OR LESS IN THICKNESS REINFORCED WITH 2-15M CONTINUOUS BARS.
8. WALL FOOTINGS TO BE 200mm DEEP WITH 100mm PROJECTIONS UNLESS OTHERWISE NOTED ON PLAN, REINFORCED WITH 2-15M CONTINUOUS BARS.
9. CENTRE FOOTINGS AND PIERS UNDER CENTROID OF WALLS AND COLUMNS, UNLESS NOTED OTHERWISE.
10. REFER TO ARCHITECTURAL DRAWINGS FOR FINISHED EXTERIOR GRADE.
11. ALL EXTERIOR CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 30MPa AT 28 DAYS, AIR ENTRAINED 6% +/- 1%.
12. ANCHOR BOLTS FOR COLUMNS, STEEL PLATES, FILLET PLATES AND ANCHOR BOLTS FOR RAIL LINE INSTALLATION (REFER TO DETAIL 1/S-3b) SHALL BE PROVIDED BY OTHERS. PACKAGE B SHALL INCLUDE ALL LABOUR AND MATERIALS REQUIRED TO SUPPLY AND INSTALL THE FOLLOWING:
    a) STRUCTURAL/MISCELLANEOUS STEEL
    b) MASONRY
    c) INFILL OF CONCRETE FLOOR SLAB AT COLUMN LOCATIONSC/W REINFORCING AND FLOOR HARDENRE AS SCHEDULED



GENERAL NOTES:

1. INSTALLING CONTRACTOR SHALL EXAMINE THE SITE AND VERIFY ALL REQUIRED RELEVANT DIMENSIONS AND CONDITIONS WHICH WILL AFFECT HIS WORK PRIOR TO FABRICATION.
2. ALL STRUCTURAL STEEL DESIGN, FABRICATION AND INSTALLATION SHALL CONFORM TO THE REQUIREMENTS OF THE CANADIAN STEEL INSTITUTE OF STEEL CONSTRUCTION APPLICABLE CODES AND SPECIFICATIONS AND THE REQUIREMENTS OF THE NATIONAL AND ONTARIO BUILDING CODE.
3. DRAWINGS HAVE BEEN PREPARED IN ACCORDANCE WITH THE HANDBOOK OF STEEL CONSTRUCTION, LATEST EDITION.
4. ALL ELEVATION SHOWN ON THE DRAWINGS ARE TO THE TOP OF STEEL UNLESS NOTED OTHERWISE.
5. CONTRACTOR TO VERIFY ALL DIMENSIONS AND CONDITIONS WITH ARCHITECTURAL DRAWINGS. REPORT ANY DISCREPANCIES TO STRUCTURAL ENGINEER PRIOR TO PROCEEDING WITH WORK.
6. CONTRACTOR IS RESPONSIBLE FOR ENSURING THAT ALL WORK IS CARRIED OUT IN ACCORDANCE WITH MINISTRY OF LABOUR REQUIREMENTS AS WELL AS THE OCCUPATIONAL HEALTH AND SAFETY ACT
8. IN CASE OF CONFLICTING INFORMATION GIVEN BETWEEN CONTRACT DRAWINGS AND SPECIFICATIONS, THE MORE STRINGENT SHALL GOVERN OR CONTRACTOR MUST SEEK CLARIFICATION IN WRITING FROM ENGINEER
9. DESIGN LOADS
    ROOF SNOW LOAD = 55 PSF
    ROOF DEAD LOAD = 20 PSF

B. STRUCTURAL AND MISCELLANEOUS STEEL

1. STRUCTURAL STEEL

STRUCTURAL STEEL SHAPES AND PLATES SHALL BE IN ACCORDANCE WITH CAN/CSA G40.20 / G40.21-M

ALL ROLLED STRUCTURAL WF SHAPES AND PLATES SHALL BE GRADE 350W.
ALL ANGLES AND CHANNEL SHAPES SHALL BE GRADE 300W.
ALL HOLLOW STRUCTURAL SECTIONS SHALL BE GRADE 350W, CLASS C
ALL PIPES SHALL BE GRADE A53 UNLESS NOTED.
STEEL ROOF DECK TO BE TO BE 3," 22 ga. GALVANIZED DECK RD306 BY VIC WEST OR APPROVED EQUAL.
SPOT WELD DECK TO SUPPORTING STEEL FRAMING @ 6" c/c AND CRIMP SIDE LAPS AT 24" c/c.

2. BOLTS

ALL STRUCTURAL BOLTS ARE ¾" DIAMETER ASTM A325 BOLTS WITH 13/16" DIAMETER HOLES UNLESS NOTED OTHERWISE ON THE DESIGN DRAWINGS. MINIMUM 2 (TWO) BOLT CONNECTION.

3. WELDING

ALL WELDING SHALL CONFORM TO THE REQUIREMENTS OF CSA W59.
ELECTRODES SHALL BE TYPE E49XX OF EQUIVALENT CONFORMING TO CSA W48.
ALL WELDING TO BE DONE BY CONTRACTORS CERTIFIED FOR DIVISIONS 1 OR 2 OF CSA W47.1
NOTE: ALL WELDS TO BE ¼" CONTINUOUS FILLETS UNLESS NOTED OTHERWISE ON THE DESIGN DRAWINGS.

C. FABRICATION

1. GENERAL

DESIGN, DETAILING AND FABRICATION SHALL BE IN ACCORDANCE TO CAN/CSA S16.1.

STRUCTURAL STEEL FABRICATOR MUST BE CERTIFIED UNDER CSA W47.1 DIVISIONS 1 OR 2. CONTRACTOR IS TO PROVIDE PROOF THAT THE STEEL FABRICATOR IS CERTIFIED.

2. DRAWING REVIEW

ALL SHOP FABRICATION DRAWINGS WILL REQUIRE REVIEW BY THE DESIGN ENGINEER.
DO NOT COMMENCE FABRICATION UNTIL DRAWINGS HAVE BEEN REVIEWED.

3. CONNECTIONS

1. STEEL FABRICATOR RESPONSIBLE FOR CONNECTION DESIGN. ALL SHOP FABRICATION DRAWINGS SHALL BEAR THE SEAL AND SIGNATURE OF A PROFESSIONAL ENGINEER REGISTERED WITH THE PROVINCE OF ONTARIO.
2. GUSSET PLATES SHALL HAVE A MINIMUM THICKNESS OF ⅜"
3. ALL BOLTED CONNECTIONS TO HAVE A MINIMUM OF TWO (2) BOLTS.

4. CAPPING

ALL OPEN ENDS OF HOLLOW STRUCTURAL SHAPES AND PIPES TO BE CAPPED WITH ⅛" THICK PLATE AND SEAL WELD ALL AROUND UNLESS OTHERWISE NOTED.

D. SURFACE PREPARATION AND PAINTING

1. FINISHED CONCRETE FLOOR TO BE TROWEL FINISH WITH HARDENER.

SURFACE PREPARATION PER SSPC-SP6 - COMMERCIAL BLAST CLEAN
PRIMER - ONE COAT STANDARD PRIME
FINISH COAT - ALKYD ENAMEL
COLOUR - LIGHT GREY

E. TAGGING OF STEELWORK:

1. FABRICATOR IS RESPONSIBLE TO PROPERLY IDENTIFY ALL SHIPPING PIECES.
2. FABRICATOR IS RESPONSIBLE TO MAKE SURE ALL LOOSE PIECES ARE PROPERLY SECURED IN PLACE FOR SHIPPING.

F. TOLERANCES

1. ACCUMULATIVE TOLERANCES NOT TO EXCEED 1/16" ON TOTAL DIMENSION.

G. CONCRETE:

1. CONCRETE AND REINFORCING STEEL FABRICATION/PLACEMENT MUST CONFORM TO CSA A23.1
2. CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 30 MPa AT 28 DAYS, AIR ENTRAINED 6% +/- 1%
3. NO ADMIXTURES, OTHER THAN AIR ENTRAINING ADMIXTURE CONFORMING TO CAN3-A266.1 MAY BE USED WITHOUT THE WRITTEN APPROVAL FROM THE ENGINEER. THE USE OF CALCIUM CHLORIDE SHALL NOT BE PERMITTED ON THIS PROJECT.
4. CONCRETE SLABS SHALL BE PROTECTED FROM LOSS OF SURFACE MOISTURE FOR NOT LESS THAN 7 DAYS BY USING A CURING COMPOUND CONFORMING TO CAN/CSA A23.1-94 OR KEPT CONTINUOUSLY MOIST AS ENVIRONMENTAL CONDITIONS MAY APPLY. CONTRACTOR TO SUBMIT PROPOSED CURING PROCEDURE TO ENGINEER FOR REVIEW PRIOR TO POURING OF CONCRETE.
5. REINFORCING STEEL TO CONFORM TO CSA G30.18 GRADE 400
6. WELDED WIRE MESH TO BE 152x 152x MW 18.7x MW18.7 CONFORMING TO CSA G30.5 USE FLAT SHEETS ONLY.
7. PROVIDE HEAVY INDUSTRIAL FLOOR HARDENER TO MANUFACTURES RECOMMENDATION
8. CONTRACTOR TO SUBMIT REBAR SHOP DRAWINGS FOR REVIEW OF THE DESIGN ENGINEER. REBAR SHOP DRAWINGS SHALL BEAR THE SEAL AND SIGNATURE OF A PROFESSIONAL ENGINEER REGISTERED WITH THE PROVINCE OF ONTARIO.

H. MASONRY

1. ALL MASONRY CONSTRUCTION SHALL CONFORM TO CAN3-A371 MANSONRY CONSTRUCTION FOR BUILDINGS.
2. WHERE DOWELS, ANCHOR BOLTS, ETC. ARE SHOWN PROJECTING INTO MASONRY, BUILD THESE TIGHTLY INTO MASONRY VOIDS WITH MASONRY GROUT OR TYPE 'M' MORTAR.
3. BENEATH STEEL AND CONCRETE BEAMS, JOISTS AND TRUSSES PROVIDE A MINIMUM DEPTH OF 400mm 100% SOLID MASONRY UNITS PROJECTING A MINIMUM OF 200mm BEYOND THE EDGES OF BEARING PLATES, UNLES OTHERWISE NOTED OR SHOWN.
4. PROVIDE A MINIMUM LENGTH OF 200mm AND A MINIMUM DEPTH OF 200mm OF 100% SOLID MASONRY FOR STEEL CONCRETE OR REINFORCED MASONRY LINTELS.
5. PROVIDE A MINIMUM DEPTH OF 200mm OR 100% SOLID MOSONRY UNITS FOR SLABS OR STEEL DECK BEARING ON MASONRY.
6. BUILD MASONRY TIGHTLY INTO WEBS OF ALL WALL BEARING STEEL BEAMS AT THEIR POINT OF BEARING.
7. BUILD MASONRY TIGHTLY INTO WEBS OF ALL STEEL COLUMNS.
8. REINFORCED MASONRY
    A) CELLS TO BE REINFORCED SHALL BE KEPT CLEAN OF MORTAR.
    B) GROUT FOR REINFORCED CELLS, BOND BEAMS, LINTELS, AND CELLS CONTAINING DOWELS, ANCHOR BOLTS AND INSERTS SHALL CONFORM TO SPECIFICATION UNDER BUILDING MATERIALS.
    C) PROVIDE 2-15M VERTICALS FULL HEIGHT AT ALL WALL ENDS, CORNERS INTERSECTIONS, AND OPENINGS UNLESS OTHERWISE NOTED ON DRAWINGS.
    D) DOWELS FROM FOUNDATIONS TO MATCH VERTICAL REINFORCEMENT IN WALL.
    E) PROVIDE THE FOLLOWING LAPS FOR THE REINFORCEMENT INDICATED:
        WIRE LADDER OR MESH 200mm
        10M BARS 450mm
        15M BARS 600mm
        20M BARS 900mm
    F) PROVIDE CLEANOUTS AT THE BASE OF THE WALL TO VERIFY PROPER PLACEMENT OF GROUT, PLACE GROUT IN MAXIMUM 2400mm LIFTS. IF NO CLEANOUT PROVIDED POUR HIGHT LIMITED TO 12mm.
9. IN EVERY SECOND BED JOINT, PROVIDE 9 GAUGE GALVANIZED LADDER TYPE JOINT REINFORCEMENT WITH SIDE AND CROSS WIRES CONTACT WELDED.

1 S-3b SAW CUTS IN SLAB ON GRADE
NOTES:
1. SAW CUTTING SHALL BE COMPLETED WITHIN 6 TO 18 HOURS OF PLACING CONCRETE.
2. AFTER THE SLAB IS 30 DAYS OLD, REMOVE ALL DEBRIS FROM THE SAW CUTS AND FILL WITH MORTAR CONTAINING CEMENT, SAND AND LATEX BONDING AGENT, OR AS NOTED IN THE SPECIFICATIONS.
3. MAXIMUM SPACING OF SAW CUTS IN SLAB ON GRADE SHALL NOT EXCEED THE FOLLOWING:
a) SLAB THICKNESS OF 100mm, MAXIMUM SPACING(mm) = 3600, UNLESS NOTED OTHERWISE.
b) SLAB THICKNESS OF 125mm OR GREATER, MAXIMUM SPACING = 4500mm UNLESS NOTED.
4. COORDINATE LOCATIONS OF SAW CUTS IN SLAB ON GRADE WITH ARCHITECTURAL FLOOR FINISHES.
5. SAW CUT SLAB ON GRADE AT COLUMNS AS SHOWN, AND ALTERNATE DETAILS SHALL BE SUBMITTED TO TO THE ENGINEER FOR REVIEW, WELL IN ADVANCE OF POURING SLAB ON GRADE.
6. PRIOR TO SUBSTANTIAL COMPLETION OF THE PROJECT, ROUT ALL CRACKS IN THE SLAB ON GRADE AND FILL WITH MORTAR CONTAINING CEMENT, SAND AND LATEX BONDING AGENT OR AS NOTED IN THE SPECIFICATIONS.
2 S-3b TYPICAL ISOLATION JOINT DETAIL IN SLAB ON GRADE AT INTERIOR COLUMN
3 S-3b SLAB ON GRADE CONTROL JOINT
4 S-3b TYPICAL SLAB THICKENING ON GRADE FOR NON LOAD BEARING WALL
NOTE: ALSO APPLICABLE UNDER STEEL STAIR STRINGERS AND IF 6" (150) MASONRY PARTITION WALL EXCEEDS 12' (3600) IN HEIGHT.
5 S-3b CHANGE OF LEVEL IN SLAB ON GRADE
6 S-3b VERTICAL CONTROL JOINTS IN WALLS
NOTES:
1. CONTROL JOINTS AT 10 m (30'-0") o/c MAXIMUM UNLESS SHOWN OTHERWISE ON ARCHITECTURAL AND/OR STRUCTURAL DRAWINGS WHEN VERTICAL CONTROL JOINTS SHOWN ON STRUCTURAL PLANS THEY ARE INDICATED THUS
7 S-3b CONSTRUCTION JOINTS IN WALLS
NOTES:
1. LOCATE CONSTRUCTION JOINTS WHERE SHOWN ON THE DRAWINGS AND/OR AS SPECIFIED.
2. IN GENERAL CONSTRUCTION JOINTS IN WALLS SHALL BE PERMITTED AT 2000 mm (6'-0") OR MORE FROM CENTERLINE OF EXPANSION JOINTS OR WALL INTERSECTIONS UNLESS APPROVED OTHERWISE.
3. CONTINUE REGULAR REINFORCEMENT THROUGH CONSTRUCTION JOINTS. PROVIDE EXTRA REINFORCEMENT AS SHOWN ABOVE.
8 S-3b TYPICAL PIT OR TRENCH DETAIL
9 S-3b REINFORCEMENT ARRANGEMENT FOR WALLS
NOTES:
1. FOR DIMENSION OF TENSION LAPS SEE SCHEDULE OF DEVELOPMENT AND SPLICE LENGTHS OF REINFORCEMENT.
2. PROVIDE STANDARD HOOKS, PROVIDED 'E' ≥ ℓdh (ie. HOOK BASIC DEVELOPMENT LENGTH). OTHERWISE PROVIDE STANDARD DEVELOPMENT LENGTH IF 'E' < ℓdh.
10 S-3b MAXIMUM SLOPE AT EXCAVATIONS
11 S-3b ARRANGEMENT OF TIES IN COLUMNS
NOTES:
1. THESE BARS MUST BE TIED AS SHOWN BY DASHED LINES WHEN 'x' DISTANCE IS OVER 150 mm(6")
2. THESE BARS NEED NOT BE TIED WHEN 'x' DISTANCE EQUALS 150 mm OR LESS.
3. APPLICABLE TO ALL TIED COLUMNS.
12 S-3b EXTRA REINFORCING BARS AT OPENINGS IN WALLS AND SLABS
NOTES:
1. FOR OPENINGS D=400mm(16") OR LARGER: ADD EXTRA BARS ON EACH SIDE OF THE OPENING, EQUIVALENT TO HALF THE TOTAL AREA OF REINFORCING CUT IN EACH DIRECTION, EACH FACE, UNLESS NOTED OTHERWISE. USE 2-15M EACH DIRECTION, EACH FACE MIN.
2. FOR OPENINGS LESS THAN 400mm: NO EXTRA BARS ARE REQUIRED ADJUST REGULAR REINFORCING AROUND OPENINGS.
DIAGONAL REINFORCING
WALL OR SLAB THICKNESS t (mm) | t<250(10") | t<250(10") | 250<t≤400(16") | t>400(16")
LAYERS OF REINFORCING | 1 | 2 | 2 | 2
REINFORCING FOR OPENINGS D≥600mm | 1-15M IN EACH CORNER IN CENTRE OF WALL OR SLAB (4 TOTAL) | NONE | 1-15M IN EACH CORNER IN CENTRE OF WALL OR SLAB (4 TOTAL) | 1-15M IN EACH CORNER IN EACH LAYER WALL OR SLAB (8 TOTAL)
13 S-3b TYPICAL DETAIL OF STEEL COLUMN FOUNDATION N.T.S.
NOTES:
(A) SLOPE OF ROCK SURFACE, ANGLE = 0 DEG. TO 15 DEGREES , DOWEL = 4-15M
(B) SLOPE OF ROCK SURFACE, ANGLE = 15 DEG. TO 30 DEGREES, DOWEL = 4-30M
(C) SLOPE OF ROCK SURFACE, ANGLE = GREATER THAN 30 DEGREES. CONSULT THE ENGINEER FOR FOUNDATION

Dear Sirs:

DESIGNATED SUBSTANCES SURVEY
Ontario Northland Remanufacturing and Repair Centre
916 McIntyre Street East
North Bay, Ontario

1.0 INTRODUCTION

Thomas Contracting was commissioned by the Ontario Northland Transportation Commission (ONTC) to complete a designated substances survey (DSS) of their Remanufacturing and Repair Centre located at 916 McIntyre Street East, North Bay, Ontario. The objective of this study was to determine whether any designated substances, as defined under the Ontario Occupational Health and Safety Act, were present within the Centre noted above prior to possible up-coming renovation work. This survey does not include and was not intended to cover any investigation of subsurface hazardous materials / designated substances.

Eleven substances have been "designated" in Ontario - acrylonitrile, arsenic, asbestos, benzene, coke oven emissions, ethylene oxide, isocyanates, lead, mercury, silica and vinyl chloride. Mould and PCB containing materials are also harmful to the environment if handled improperly and therefore are included in our study.

The Ontario Occupational Health and Safety Act requires that a list of all designated substances at a project site be provided to all bidders at the tendering stage. A Designated Substance Survey (DSS) identifies the designated substances present, their locations and concentrations. This information allows contractors involved in demolition or renovation activities to take appropriate steps to control exposure of workers and the general public to the designated substances that are present.

This survey satisfies requirements of the Occupational Health and Safety Act with regards to the presence / absence of designated substances identified within this report.

The study area, methodology and findings are outlined in the sections, which follow.

2.0 STUDY AREA

The study area under this assessment consisted of five (5) separate buildings (see photos 1 to 5 in Appendix 'A') located on the subject property as follows.

1. Power House
2. Grit and Paint Shop
3. Diesel Shop
4. Car Shop
5. Wheel Shop

3.0 STUDY METHODOLOGY

During October 2018, Thomas Contracting personnel conducted the fieldwork portion of the DSS assessment of the buildings noted above, focusing primarily on asbestos-containing materials, lead painted surfaces and mercury containing materials (thermostatic controls and fluorescent light tubes).

Access to suspected designated substances was made following industry-standard, testing protocols. All collected samples were subsequently labeled and the retrieval location(s) identified. All collected samples of suspected asbestos-containing material and lead-containing paint were forwarded to our laboratory subconsultant for positive identification of asbestos fibres and lead content levels.

4.0 ASBESTOS-CONTAINING MATERIALS (ACM's)

The DSS resulted in the retrieval of one hundred and fifty-three (153) representative samples of potential asbestos-containing material (90 of which required testing under Ont. Reg. 278/05). The potential ACM sampled consisted of pipewrap insulation, elbow/fitting insulation, jacket insulation, vinyl flooring, plaster, drywall mud (compound), ceiling tile, caulking and sprayed applied insulation. All samples were submitted to our laboratory sub-consultant (Lex Scientific Inc., Ontario) for PLM bulk analysis with photos of each sample material and laboratory transcripts of the findings presented in Appendix 'A'.

A summary of sample locations and type of building material is presented in Table 1 (below) with the raw laboratory results and photos given in Appendix 'A'. Locations (including floor plans) containing ACM's representative of the obtained bulk samples are shown in the "Building / Room DSS" table in Appendix 'D'.

4.1 Asbestos Findings

Based on our site assessment and laboratory results, the following general asbestos findings are presented in table 2 (below) with a further detailed "Building / Room DSS" table of our findings presented in Appendix 'D'.

Table 2
Summary of Asbestos Findings

Building	***Asbestos Findings***
Power House	• *All thermal system insulation (Pipewrap, Elbows/Fittings, Headers, Breeching/Exhaust, Jacket Insulation and possible Refractory Brick) within Rooms 100 & 200 (boiler area & mezzanine) is asbestos-containing.* • *All thermal system insulation (Pipewrap, Elbow/Fitting Insulation) within Room 102 (electrical area) is fibreglass.* • *All Exterior Window and Door Caulking is asbestos-containing.* • *Minor repair work to existing ACM's is recommended.*
Wheel Shop	• *All thermal system insulation (Pipewrap, Elbow/Fitting and Header Insulation) is asbestos-containing.* • *All Exterior Window and Door Caulking is asbestos-containing.* • *Minor repair work to existing ACM's is recommended.* • *Vinyl Floor Tiles, Drop Ceiling Tiles and Wall / Ceiling Plaster is non-asbestos.*
"Old" Paint & Grit Shop	• *All Elbow/Fitting and Jacket Insulation is asbestos-containing.* • *Vinyl Floor Tiles are asbestos-containing.* • *Drywall Joint Compound is non-asbestos.* • *All Pipewrap and Ductwork Insulation is fiberglass.*

"New" Paint Shop 2005	• *Nothing found or suspected.*
Diesel Shop (Original Area)	• *All thermal system insulation (Pipewrap, Elbows/Fittings, Headers and Jacket Insulation) is asbestos-containing.* • *All Sprayed Applied Insulation, Wall & Ceiling Plaster, Vinyl Flooring, Drywall Joint Compound and Ceiling Tiles (including sub-ceiling 12" x 12" tiles) are non-asbestos or fibreglass.* • *"Transite" panels on upper part of exhaust hoods for locomotives are asbestos-containing (see photo # 43c in Appendix A).* • *All Exterior Window and Door Caulking is asbestos-containing.* • *Minor clean-up work to existing ACM's is recommended within Room 4.* • *Minor repair work to existing ACM's is recommended.*
Diesel Shop (Addition Area)	• *Nothing found or suspected.* • *All thermal system insulation (Pipewrap, Elbows/Fittings, Headers and Jacket Insulation) is non-asbestos or fibreglass.*
Car Shop	• *All Elbow/Fitting Insulation is asbestos-containing.* • *All Pipewrap and Ductwork Insulation is fiberglass.* • *Vinyl Flooring, Drop Ceiling Tiles and Drywall Joint Compound is non-asbestos.*
"New" Car Shop Office Area	• *Nothing found or suspected.*

Should future activities (demolition/renovation) occur within the buildings noted above which would disturb the asbestos-containing noted in this report, Thomas Contracting recommends that the affected material(s) be removed prior to these activities. This work must be carried out as outlined in R.R.O 2005, Reg. 278, Regulation respecting Asbestos on Construction Projects and in Building and Repair Operations.

5.0 LEAD-CONTAINING BUILDING MATERIALS

The survey resulted in the retrieval of twenty (20) representative samples of paint observed within the five buildings under this DSS. These paint samples were submitted to our laboratory sub-consultant (Caduceon Environmental Laboratories, Ottawa, Ontario) for follow-up lead analysis. Photo of the sampled paint(s) and the laboratory transcript of the findings are presented in Appendix 'B'.

A summary of sample location, surface paint colour and lead content is presented in Table 3 (below).

Table 3

ONR – 69	*62*		*Wall Paint in Mech. Room 'A' (surface colour = light beige)*	*380*

5.1 Lead Paint Definition

In absence of a Canadian regulated definition of what constitutes a lead-based paint, the "Lead Guideline for Construction, Renovation, Maintenance or Repair", issued in October 2014 by the Environmental Abatement Council of Ontario (EACO) was followed.

Term	Definition	Guideline Requirements
Low-level lead paints and surface coatings	*Paint or surface coating containing less than or equal to 0.1% lead by dry weight (1000 µg/g, mg/kg, ppm).*	*If these materials (and the surfaces to which they are applied) are disturbed in a non-aggressive manner, performed using normal dust control procedures and are completed so that the TWA for PNOS is not exceeded, then worker protection from the inhalation of lead is not required. General health and safety precautions must still be implemented, which may include, in part, prohibiting eating, drinking, smoking and chewing in the work area, implementing dust suppression techniques and washing facilities for workers to wash hands and face.*
Lead-containing paints and surface coatings	*Paint or surface coating containing greater than 0.1% lead by dry weight (1000 µg/g, mg/kg, ppm) and less than 0.5% lead by dry weight (5000 µg/g, mg/kg, ppm).*	*Tasks performed that disturb these materials must be completed in accordance with the Classifications of Work Operations (in Section 7) and corresponding procedures (in Section 8). Alternatively, a hygiene or exposure assessment can be performed to determine procedures that are required.*
Lead-based paints and surface coatings	*Paint or surface coating containing equal to or greater than 0.5% lead by dry weight (5000 µg/g, mg/kg, ppm).*	*Tasks must always be completed in accordance with the procedures listed in the Classifications of Work Operations (in Section 7) and corresponding procedures (in Section 8). Alternatively, a hygiene or exposure assessment can be performed to determine procedures that are required.*

5.2 Lead Findings

Based on our site assessment and laboratory results, the following general lead findings are presented in Table 4 (below) with a further detailed "Building / Room DSS" table of our findings presented in Appendix 'D'.

Table 4
Summary of Lead Findings

Building	Lead Findings
Power House	• *Wall, ceiling and structural paint observed within the building is classed as Lead-containing paint.*
Wheel Shop	• *Wall, ceiling and structural paint observed within the building is classed as Lead-based paint.*
"Old" Paint & Grit Shop	• *Wall, ceiling and structural paint observed within the building is classed as Low-level lead paint.*
"New" Paint Shop 2005	• *Wall, ceiling and structural paint observed within the building is classed as Low-level lead paint.*

Diesel Shop (Original Area)	• *Wall, ceiling and structural paint observed within the building is classed as both Lead-containing and Lead-based paint.* • *Exterior window / door flashing and window sill plate caulking (see photos 63 & 64 in Appendix B) are both classed as Lead-based materials.*
Diesel Shop (Addition Area)	• *Wall, ceiling and structural paint observed within the building is classed as Low-level lead paint.* • *Exterior window / door flashing and window sill plate caulking (see photos 63 & 64 in Appendix B) are both classed as Lead-based materials.*
Car Shop	• *Wall, ceiling and structural paint observed within the building is classed as Low-level lead paint.* • *Lead-acid batteries storage in Room 117 (see photo 64a in Appendix B).*
"New" Car Shop Office Area	• *Wall, ceiling and structural paint observed within the building is classed as Low-level lead paint.*

Should future activities (demolition/renovation) occur within the buildings noted above which would disturb the lead materials noted in this report, Thomas Contracting recommends that the affected material(s) be removed prior to these activities. This work should be carried out as outlined in "Lead Guideline for Construction, Renovation, Maintenance or Repair", issued in October 2014 by the Environmental Abatement Council of Ontario (EACO).

5.3 Lead Pipes / Solder

Although not sampled due to inflicting damage / leaks to the existing plumbing within all five buildings, it is Thomas Contracting opinion based on visual inspection that lead may also be present as a component in pipes and in solder used in pipe fittings.

5.4 Lead Precautions

Prior to any renovations or demolition activities that may disturb materials identified to contain lead of any concentration, precautions must be taken as described in Ontario Regulation 213/91 as amended, Regulations for Construction Projects - made under the Occupational Health and Safety Act. This may include conducting an assessment of the potential exposure of airborne lead by a qualified person.

Exposure to lead-containing materials is regulated under the Revised Regulation of Ontario 843/90 as amended, Regulation respecting Lead - made under the Occupational Health and Safety Act including disposal of such material Ontario Regulation 347/90 Schedule 4 – Leachate Quality Criteria (Acceptable Lead Concentrations of < 5.0 mg/l). Care must be taken to prevent lead-containing particles from becoming airborne during the disturbance of lead-containing surfaces (i.e., during renovation or demolition projects). All lead abatement work must follow procedures outlined in both the "Guideline for Lead on Construction Projects", issued in September 2004 by the Occupational Health and Safety branch of the Ministry of Labour and the "Lead Guideline for Construction, Renovation, Maintenance or Repair", issued in October 2014 by the Environmental Abatement Council of Ontario (EACO).

6.0 MERCURY

Mercury is a naturally occurring metal. At room temperature it is a shiny, silver coloured odourless liquid. When heated it becomes a colourless, odourless gas. Mercury can be found in fluorescent light tubes, electrical switches, thermostats, thermometers, dental fillings, certain batteries and in some manufacturing processes.

The nervous system is very sensitive to all forms of mercury; however, vapour is especially harmful as it directly reaches the brain. Exposure to high levels of mercury may permanently damage the brain, kidneys and a developing fetus. Short-term exposure may cause lung damage, nausea, vomiting, skin rashes, and eye irritation.

6.1 Fluorescent Light Tubes Findings

Based on our site assessment the following general mercury findings are given in table 5 (below) with a further detailed "Building / Room DSS" table of our findings presented in Appendix 'D'.

Table 5
Summary of Fluorescent Light Tubes Findings

Building	***Mercury Findings***
Power House	• *Fluorescent Tubes*
Wheel Shop	• *Fluorescent Tubes*
"Old" Paint & Grit Shop	• *Fluorescent Tubes* • *Wall Thermostat*
"New" Paint Shop	• *Fluorescent Tubes*
Diesel Shop (Original Area)	• *Fluorescent Tubes* • *Wall Thermostat*
Diesel Shop (Addition Area)	• *Fluorescent Tubes* • *Wall Thermostat*
Car Shop	• *Fluorescent Tubes* • *Wall Thermostat*
"New" Car Shop Office Area	• *Fluorescent Tubes*

6.2 Thermostatic Control Switch Findings

Wall mounted thermostatic control switches, which contains small amounts of liquid mercury, were observed within all five buildings. Observed locations are detailed in our "Building / Room DSS" table of our findings presented in Appendix 'D'.

6.3 General Notes

Prior to any renovations or demolition activities that may disturb materials identified or suspected to contain mercury of any concentration, precautions must be taken to prevent mercury vapours from becoming airborne or liquid mercury contaminating the surrounding environment. Exposure to airborne mercury is regulated under the Revised Regulation of Ontario 844/90 as amended, Regulation respecting Mercury - made under the Occupational Health and Safety Act.

Mercury waste must be handled and disposed of according to the Revised Regulation of Ontario 347/90 as amended - made under the Environmental Protection Act, and may be subject to Leachate Criteria (Schedule 4) of this regulation. Therefore, it is our recommendation that prior to any demolition / renovation activity or if the fluorescent tubes/switches will not be utilized in the future, the fluorescent tubes and thermostatic control switches shall be disposed of properly or recycled by a licensed contractor.

7.0 SILICA

Although not sampled under this study, it is are opinion that free crystalline silica (common construction sand) may be present a component of concrete, mortar, brick, masonry, ceramics, granite, slate, stone, asphalt, etc., used in the construction of the building.

Precautions must be taken to prevent silica-containing particles from becoming airborne during the disturbance of silica-containing surfaces, such as during renovation or demolition projects. Exposure to airborne silica is regulated under the Revised Regulation of Ontario. 845/90 as amended, Regulation respecting Silica - made under the Occupational Health and Safety Act. All work being carried with silica containing materials should be conducted following the Guide Silica on Construction Projects issued September 2004 by the Occupational Health and Safety branch of the Ministry of Labour. Silica waste must be handled and disposed of according to the Revised Regulation of Ontario 347/90 as amended - made under the Environmental Protection Act.

8.0 OTHER DESIGNATED SUBSTANCES

8.1 Acrylonitrile

No source was identified. Acrylonitrile or CAN (also known as vinyl cyanide) is an explosive, flammable liquid used in the manufacture of acrylic fibres, robber-like materials and pesticide fumigants.

8.2 Arsenic

No source was identified. Arsenic is used in metallurgy for hardening copper, lead and alloys, in pigment production, in the manufacture of certain types of glass, in insecticides, fungicides and rodenticides, as a by-product in the smelting of copper ores, and as a dopant material in semiconductor manufacturing.

8.3 Benzene

No source was identified. Benzene or benzol is a colourless liquid. It is used as an intermediate in the production of styrene, phenol, cyclohexane, and other organic chemicals, and in the manufacture of detergents, pesticides, solvents, and paint removers. It is also found in gasoline.

8.4 Coke Oven Emissions

Not applicable for the surveyed site.

8.5 Ethylene Oxide

No source was identified. Ethylene oxide is a colourless gas liquefying below 12°C. It is used generally as a fumigant and sterilizing agent for medical equipment.

8.6 Isocyanates

No source was identified. Isocyanates (HDI, MDI and TDI) are used in the production of polyurethane and as an elastomer in casting compounds, mastics, and textile coatings (IPDI).

8.7 Vinyl Chloride

No source was identified. Vinyl chloride, also known as chloroethylene, is a colourless gas but is usually handled as a liquid under pressure. It is used in the production of PVC resins and in organic synthesis.

9.0 SUMMARY

A designated substances survey of the ONTC Remanufacturing and Repair Centre located at 916 McIntyre Street East, North Bay, Ontario, confirmed the presence of the following:

- *Asbestos-containing building material (ACM's).*
- *Lead paint.*
- *Lead materials "suspected" to be present as components in pipe and in solder used in pipe fittings.*
- *Liquid mercury in thermostatic control switch.*
- *Possible silica in concrete, mortar, brick, masonry, ceramics, granite, slate, asphalt, etc.*

10.0 RECOMMENDATIONS

10.1 Asbestos-containing Material (ACM's)

Based on our field observations, the majority of the identified ACM's do not pose a health hazard in their present state, however minor repair work is recommended to all slightly damaged ACM's including clean-up of fall-out elbow insulation noted on the floor within Room 4 of the Diesel Shop.

Should repair, removal or disposal of any asbestos-containing materials noted in this report be undertaken, all work must be performed in accordance with Ont. Reg. 278, "Regulation respecting Asbestos on Construction Projects and in Building and Repair Operations" and all applicable Federal and Provincial statutes as noted in our report.

10.2 Lead-containing Materials & Paints

Based on our observations, the identified lead paints, window flashing & caulking and possible lead containing pipes do not pose a health hazard in their present state. However, should removal and disposal of any lead-containing paint and possible lead containing pipes be undertaken, work should be performed in accordance with applicable Federal and Provincial statutes as noted in our report.

10.3 Mercury-containing Materials

Based on our observations, the identified mercury-containing equipment / products do not pose a health hazard in their present condition. All maintenance, removal and disposal of any mercury-containing materials must be performed in accordance with applicable Federal and Provincial statutes as noted in our report.

10.4 Silica-containing Materials

Based on our observations, the identified Silica - containing materials do not pose a health hazard in their present condition. All maintenance, removal and disposal of any Silica-containing materials must be performed in accordance with applicable Federal and Provincial statutes as noted in our report.

11.0 LIMITATIONS AND WARRANTY

- *This report is for the exclusive use of the client, their agents, and is neither an endorsement nor condemnation of the subject property.*
- *Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such parties. Thomas Contracting accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report. In particular, any contractors bidding on site demolition or renovation work should not rely solely upon the present report for volume or quantity estimates, and should satisfy themselves of the exact quantities and conditions encountered on-site before bidding or initiating any project work, and adapt the appropriate work practices needed to comply with the applicable Federal / Provincial codes and regulations. Proper, detailed, tender packages should be prepared and supplied to contractors prior to the initiation of any renovation or demolition activities.*
- *The findings and conclusions documented in this report have been prepared for specific application to this project and have been developed in a manner consistent with that level of care and skill normally exercised by qualified professionals currently practicing in this area of environmental assessment. No other warranty, expressed or implied, is made.*
- *The findings contained in this report are based upon conditions as they were observed at the time of investigation. No assurance is made regarding changes in conditions subsequent to the time of the investigation.*
- *Please note that the above survey was limited to the extent of the visual observation and discrete samples collected. Inaccessible areas could not be investigated, and should renovation / demolition work encounter conditions not reported in this document, Thomas Contracting should be retained to provide comments and guidelines on how to proceed.*
- *Some findings contained in this report may be based upon information provided by occupants or employees. No guarantee is made regarding the accuracy of this information. All attempts have been made to independently verify the accuracy of such information unless specifically noted in our report.*
- *If new information is developed in future work, Thomas Contracting should be contacted to re-evaluate the conclusions of this report and to provide amendments as required.*

12.0 CLOSURE

We trust this report meets your current requirements. Should you have any questions in this regard or require further clarification, please do not hesitate to contact the undersigned at this office.

Yours truly,
Thomas Contracting

Analysis Requested **Bulk Asbestos by PLM**

Analysis was performed in accordance with the method EPA/600/R-93/116, Method for the Determination of Asbestos in Bulk Building Materials adopted in Designated Substance - Asbestos on Construction Projects and in Buildings and Repair Operations - made under the Occupational Health and Safety Act Ontario Regulation 278/05. LEX Scientific Inc. is accredited by the National Voluntary Laboratory Accreditation Program (NVLAP 101949) by the National Institute of Standards and Technology for analysis of bulk materials for asbestos.

Contact:	Mr. Grant Johnson	**Analysis Date:**	01-Nov-18
Client Address:	72 Ninovan Road, CALLANDER, ON	**Received Date:**	31-Oct-18
Client Reference:	ONR - DSS	**LEX Project Number:**	08181864
Sampling Date:	30-Nov-18	**Number of Analyses:**	14

Analysis Requested **Bulk Asbestos by PLM**

Analysis was performed in accordance with the method EPA/600/R-93/116, Method for the Determination of Asbestos in Bulk Building Materials adopted in Designated Substance - Asbestos on Construction Projects and in Buildings and Repair Operations - made under the Occupational Health and Safety Act Ontario Regulation 278/05. LEX Scientific Inc. is accredited by the National Voluntary Laboratory Accreditation Program (NVLAP 101949) by the National Institute of Standards and Technology for analysis of bulk materials for asbestos.

Photo # 44
Sample # ONR – 4 : Wall paint located within the Power House - Room 100.
Deem to be Lead-based paint. (surface colour = green)

Photo # 45
Sample # ONR – 5 : Ceiling paint located within the Power House – Room 100.
Deem to be Lead-containing paint. (surface colour = off white)

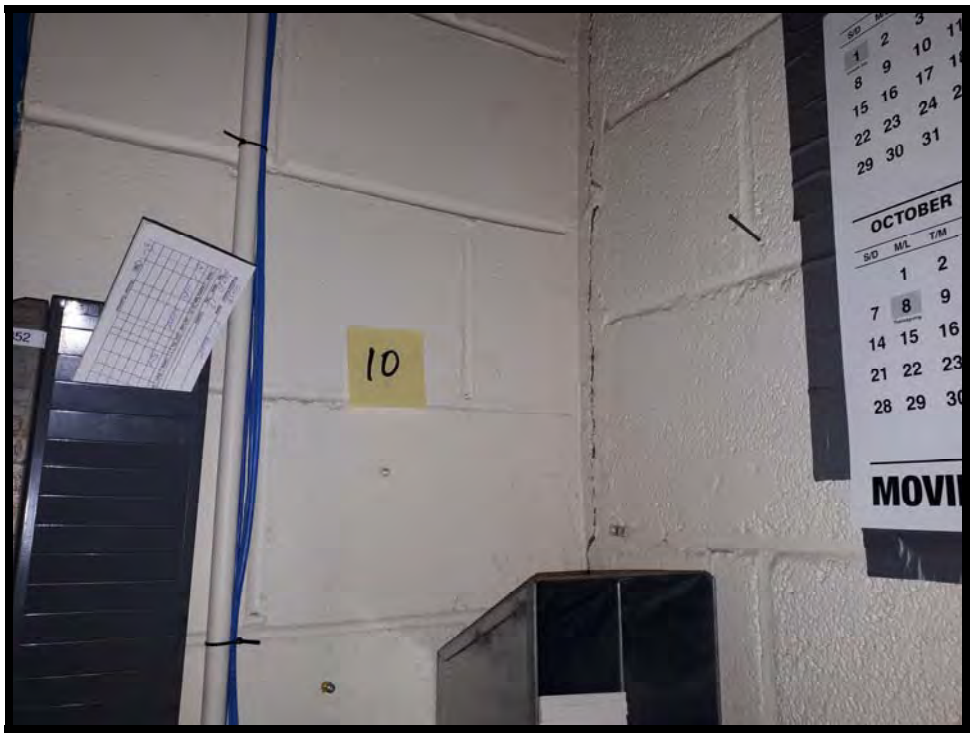

Photo # 46
Sample # ONR – 10 : Wall & Ceiling paint located within the Wheel Shop - Room 1.
Deem to be Lead-based paint. (surface colour = off white)

Photo # 47
Sample # ONR – 11 : Wall & Ceiling paint located within the Wheel Shop – Electrical Room.
Deem to be Lead-containing paint. (surface colour = yellow)

Photo # 48
Sample # ONR – 19 : Wall paint located within the Wheel Shop - Room 7.
Deem to be Lead-based paint. (surface colour = beige)

Photo # 49
Sample # ONR – 21 : Ceiling paint located within the Wheel Shop – Room 7.
Deem to be Low-level lead paint. (surface colour = off white)

Photo # 50
Sample # ONR – 23 : Wall paint located within the "Old" Paint & Grit Shop – Stairs 1. Deem to be Low-level lead paint. (surface colour = light beige)

Photo # 51
Sample # ONR – 26 : Wall paint located within the "Old" Paint & Grit Shop – Room 9. Deem to be Low-level lead paint. (surface colour = light beige)

Photo # 52
Sample # ONR – 34 : Wall & Ceiling paint located within the Diesel Shop – Room 3.
Deem to be Lead-containing paint. (surface colour = beige)

Photo # 53
Sample # ONR – 37 : Wall paint located within the Diesel Shop – Room 6.
Deem to be Lead-based paint. (surface colour = green)

Photo # 54
Sample # ONR – 39 : Ceiling paint located within the Diesel Shop – Room 5.
Deem to be Lead based paint. (surface colour = dark green)

Photo # 55
Sample # ONR – 47 : Structural Steel paint located within the Diesel Shop – East Area. Deem to be Lead-based paint. (surface colour = beige)

Photo # 56
Sample # ONR – 49 : Wall & Ceiling paint located within the Diesel Shop – Room 16.
Deem to be Lead-containing paint. (surface colour = light beige)

Photo # 57
Sample # ONR – 55 : Wall paint located within the Diesel Shop – Addition Area.
Deem to be Low-level lead paint. (surface colour = green)

Photo # 58
Sample # ONR – 56 : Wall & Ceiling paint located within the Diesel Shop – Room 100.
Deem to be Lead-containing paint. (surface colour = light beige)

Photo # 59
Sample # ONR – 62 : Wall paint located within the Diesel Shop – Room 201.
Deem to be Lead-based paint. (surface colour = green)

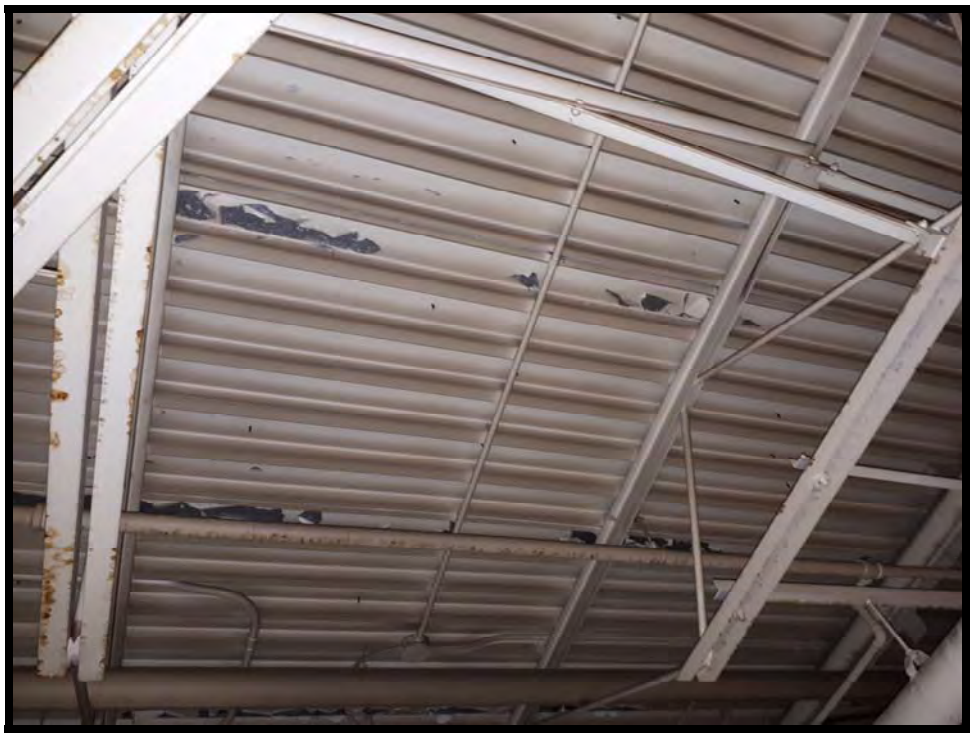

Photo # 60
Sample # ONR – 66 : Ceiling paint located within the Car Shop – Room 200.
Deem to be Lead-based paint. (surface colour = beige)

Photo # 61
Sample # ONR – 67 : Wall paint located within the Car Shop – Room 200.
Deem to be Lead-based paint. (surface colour = green)

Photo # 62
Sample # ONR – 69 : Wall paint located within the Car Shop – Room B.
Deem to be Low-level lead paint. (surface colour = light beige)

Photo # 63
Lead-based metal flashing used on exterior windows and doors on Wheel Shop.
Also used on exterior windows and doors on Wheel Shop.

Photo # 64
Lead-based caulking used on exterior windows sill's on Wheel Shop.
Also used on exterior windows and doors on Wheel Shop.

Photo # 64a
Lead-based caulking used on exterior windows sill's on Wheel Shop.
Also used on exterior windows and doors on Wheel Shop.

APPENDIX 'C'

Thermostatic Control Switch Photo (Mercury)

Photo # 65
Wall mounted "Honeywell" Thermostatic Control Switch – Mercury Containing.
Located within the "Old" Paint & Grit Shop – Room 10.
Typical of other Thermostats' found throughout all buildings

Photo # 66
Wall mounted "Honeywell" Thermostatic Control Switch – Mercury Containing.
Located within the Diesel Shop – Room D.
Typical of other Thermostats' found throughout all buildings.

Photo # 67
Wall mounted "Honeywell" Thermostatic Control Switch – Mercury Containing.
Located within the Car Shop – Room 200.
Typical of other Thermostats' found throughout all buildings.

APPENDIX 'D'

Building / Room DSS Assessment

BUILDING / ROOM DSS ASSESSMENT

POWER HOUSE

Location (Room / Area)	***Asbestos-Containing Materials (Component – Material – Sample # – Est. Qty.)***	***Lead-Containing Materials (Material – Sample #)***	***Mercury-Containing Materials***	***Silica***
Exterior	• *Window Caulking – ONR 20 – 50 ft^2*	• *No suspected LCM's*	• *No suspected MCM's*	• *Block / Brick Walls* • *Concrete Slabs* • *Concrete Foundations*
100 (Boiler Area)	• *Cold Water – Elbow/Fitting Insulation – ONR 1 – 22* • *HPS – Pipewrap Insulation – SAS 2 – 200 ft* • *HPS – Header Insulation – SAS 2 – 20 ft* • *HPS – Elbow/Fitting Insulation – SAS 1 – 10* • *Condensate Line – Pipewrap Insulation – ONR 2 – 200 ft* • *Condensate Line – Elbow/Fitting Insulation – SAS 1 – 23* • *Boiler Feed & Make-up Line – Pipewrap Insulation – SAS 2 – 130 ft* • *Boiler Feed & Make-up Line – Elbow/Fitting Insulation – SAS 1 – 10* • *Boiler Breeching/Exhaust – Pipewrap Insulation – ONR 3 – 160 ft* • *Boiler Units – Possible jacket insulation and refractory brick*	• *Green Wall Paint – ONR 4* • *White Ceiling Paint – ONR 5*	• *Fluorescent Tubes (50)*	• *Ceramic Floor Tile* • *Block Walls* • *Concrete Slabs* • *Concrete Foundations* • *Refractory Brick*
101 (Office)	• *No suspected ACM's*	• *No suspected LCM's (modern blue latex paint)*	• *Fluorescent Tubes (4)* • *Possible PCB's in light fixture ballast*	
102 (Electrical Area)	• *No suspected ACM's*	• *Green Wall Paint – ONR 4* • *White Ceiling Paint – ONR 5*	• *No suspected MCM's*	
200 (Mezzanine)	• *Jacket Insulation on Deaerator Tank – ONR 6 – 250 ft^2* • *HPS – Pipewrap Insulation – SAS 2 – 22 ft* • *HPS – Elbow/Fitting Insulation – SAS 1 – 10*	• *Green Wall Paint – ONR 4* • *White Ceiling Paint – ONR 5*	• *No suspected MCM's*	

Notes:
a) This table is to be read in conjunction with Thomas Contracting Report TC - 201434, and requires interpretation assistance before use by others.
b) Samples : "ONR" designation are primary samples obtained and "SAS" designation are representative materials based on the primary sample.
c) Estimated quantities are for guidance only and are not to be used for tendering purposes.

Blue Signals/ Flags Procedure

Procedure No. HSP-007 **Date Issued: February 7, 2014**	**Revision:** **Date:**
Approved By: **H&S Mgmt Co-chair**	**Approved By:** **CMO/ VP**

PURPOSE AND SCOPE

Signals are used to ID equipment undergoing repair or maintenance on live tracks. Blue signals are required when working between, underneath and on top of equipment outside of shops, but can be used anywhere when safety may be in doubt. These blue signals are used by shop employees, contractors and customers.

RESPONSIBILITIES

The Supervisor is responsible for ensuring this procedure is adhered to. Employees are to follow the instructions included in this safe operating procedure as well as any additional instructions given by his or her supervisor.

PROCEDURE

Transport Canada Operating Rules (RAC)

- Recommended Blue Flag Specifications:
  a. Blue flags shall be blue in color and clearly distinguishable from both sides.
  b. The dimension of the blue flag should be a minimum of 14 inches by 10 inches. Blue flag should be at a minimum height of 18 inches from the top of the rail to the bottom of the flag.
  c. The blue flag must be maintained in good condition
- Supervisor may appoint a competent person to set up and remove blue signal protection.
- Blue signal to be placed between the switch and first car ensuring it is far away from the switch as to not interfere with said switch. When blue flagging equipment, where possible place flag a minimum of one car length from equipment and refer to C.R.O.R. Rule 26 on placing equipment in front of a blue signal
- When working in yards or high traffic areas, employees should be in communication with persons responsible for switching and carry a radio to monitor traffic.
- Repair work is any work performed in the red zone between, underneath, and on top.
- Adjoining track may be blue-flagged also if there is a hazard while performing duties and also if the employee will foul said track.

REVISION RECORD

Description of Change	*Date*
Original Issue	2/7/14

Lockout Tag out Procedure

Procedure No. HSP-008 **Date Issued: February 9, 2017**		**Revision:** **Date:**
Approved By: **H&S Mgmt Co-chair**	**Approved By:** **H&S Union Co-chair**	**Approved By:** **Director of Operations**

PURPOSE AND SCOPE

To ensure that dangerous machines are properly shut off and not started up again prior to the completion of maintenance or servicing work. This must be followed to avoid the unexpected energization or start up of the machinery or equipment, or the release of stored energy, which could cause injury to employees.

RESPONSIBILITIES

The Supervisor is responsible for ensuring this procedure is adhered to. Employees are to follow the instructions included in this safe operating procedure as well as any additional instructions given by his or her supervisor.

PROCEDURE

The following SIX STEPS are a review of basic steps for safely de-energizing equipment:

1. Notify all "affected employees" that the equipment will be shut down.
2. Shut down the equipment by normal stopping procedures. Open the main disconnect switch or breaker.
   Note: Disconnect switches should never be pulled while they are under load. Shutdown everything you can at the point of operation, then pull the main switch with your LEFT hand while facing away from the switch box.
3. "Isolate" all the equipment's energy sources.
   a. **Electrical-** All Electrical lockouts must be done by designated qualified personnel the only acceptable electrical lock out is to lock the correct disconnect switch in the OFF position. Where possible, it is also advisable to remove the fuses. When an electrical lockout is necessary and the control is a breaker, lockout the breaker where possible or switch off the breaker and lock the panel door,
   b. **Steam/Air/Gas & Hydraulics-** These sources of power can be locked out by chains attached to the valves, by valves with built-in lockout devices or by designing special attachments for the valves. In pneumatic and hydraulic power systems, the pressure between the lock out and the machine must be reduced to zero before any work is begun. The pressure should be reduced slowly through a bleed-off valve. If the system does not incorporate a bleed-off valve, very slowly loosen a line fitting to reduce the pressure.
   c. **Confined Spaces** – Where work is to be done in the confined spaces such as tanks, bins, etc., the supply lines must be blanked off or disconnected. Valves alone must never be depended upon. Pumps or other related power equipment must be locked out and the person in the confined space must keep the key.
4. Lock out and/or tag out the energy isolating devices with assigned, individual locks. Every employee involved must also put their own lockout and tag on each source of power at this time.
5. Release or restrain any stored energy by grounding, blocking, bleeding down, etc.

6. Assure that no personnel are exposed, and then test the equipment to assure that it will not operate. (check the lockout cannot be operated, then try the machine controls to verify a proper disconnect)

Restoring Equipment to Service:

1. Check to Assure that all employees have been safely positioned or removed from the area.
2. Verify that equipment controls are in neutral.
3. Remove lockout devices and/or tags and re-energize the machine or equipment. (each employee involved is responsible for removal of their own lockout and tag)
4. Notify affected employees that servicing is complete and the equipment is ready for use.

REQUIREMENTS

1. Employee should have metal tag with name and number stamped on the tag for each lock out you use. The tag is to be placed on the shank of the lockout each time the lock out is used.
2. Disconnects should be clearly marked to identify the equipment they energize or control.
3. Never depend on a push button as a means of locking out the equipment. The only positive lock out is made at the disconnect or breaker.
4. If you are being reassigned or going off shift and someone else is going to finish the job, your relief must put on their lock out before you remove your lock out
5. Employees will be issued one key with each lock. A duplicate key will be kept in the Supervisor's office. Each lock and key shall be numbered for ease of identification. The duplicate key is to be used in case of emergency.
6. Uno circumstances should lockout be borrowed or loaned.

LOCK OUT REMOVAL PROCEDURE:

1. The area Supervisor shall be informed that a lock out needs to be removed and that the person assigned the lock out cannot be located.
2. The area supervisor will make every effort to contact the lock out owner and documents these attempts
3. If the area supervisor removing the lockout is not the supervisor of the lock out owner, that supervisor will be contacted if possible
4. If the above persons cannot be contacted and the area in question has been inspected and is clear of hazards to everyone, the lock out may be removed (cut-off).

OSHA Standard: 29 CFR 1910.147
Canada Labour code – Part II

REVISION RECORD

Description of Change	*Date*
Original Issue	2/9/17

General Requirements for Contractors:

1. The Contractor will be required to complete the work in accordance with all applicable federal, provincial, and municipal laws.

2. The Contractor will be required to obtain and pay for all necessary permits, fees, inspections, and ministry notifications required for the project including, but not limited to, the following:
    - Filing notice of project with the Ontario Ministry of Labour.
    - Registering as Constructor with the Ontario Ministry of Labour.
    - Obtaining all necessary building permits and inspections.

3. The Contractor must strictly adhere to the inspection schedule detailed on the supplied drawings and documents.

4. Contractor to provide all locates required to complete work. Locates are required before breaking any ground or floor.

5. The Contractor will be required to secure their work area (create construction islands) for the duration of the project. The Contractor will be responsible for all activities inside this construction island, including health and safety. The Contractor shall coordinate their work with ONTC to ensure that disruption to work being done by ONTC employees in the areas outside of the construction island is not interrupted. Access by the Contractor will be restricted to the work area (construction island) only.

    Note that construction islands established by the Contractor must be blue flagged following the ONTC Blue Signals/Flags Procedure, Procedure No. HSP-007 (included with this RFQ), if the construction islands block live tracks. Also note that obstructions to road and pedestrian traffic must be kept to a minimum and coordinated with ONTC.

6. The Contractor will be required to perform all remediation work for designated substances which is required to complete the work for the Project, including the removal and disposal of any designated substances in accordance with all applicable laws. The cost of this remediation and disposal shall be included in the Contractor's price submission.

7. The Contractor shall remove all demolished material from ONTC property and pay for all disposal fees, with the exception of excavated material. Any excavated material (soil, gravel, sand, etc,) should be assumed to be contaminated and will remain on site.

8. The Contractor will have access to the construction island, 24 hours per day, seven days per week. The Contractor will be required to coordinate their hours of work with ONTC and maintain a record of all persons accessing the site that at a minimum includes the name of the person, time-in, time-out and their site contact with the Contractor.

9. The Contractor shall:
    - Supply their own on-site facilities, including construction trailer, washrooms, and eating area.
    - Plan and organize the work prior to and during construction.
    - Provide all required shop drawing submittals in compliance with the contract documents.
    - If there are no requirements for shop drawing submittals in other documents, Provide shop drawing submittals in compliance with following requirements
        - Submit shop drawings for review to owner's representative or owner for review within two weeks of project award.
        - Submit shop drawings in electronic format unless another delivery method is warranted and authorized by the owner.
        - Clearly identify any submittals that are a priority such as long lead time items or critical path items.
        - Shop drawings shall be reviewed, stamped, and signed by the contractor/s prior to submission to the owner's representative or the owner. Submittals shall include at minimum: All technical specifications, drawings, and characteristics required to determine suitability for purpose, dimensions, clearances, colours and finishes, the details of any required services (such as electricity, water, or natural gas), Coordination with existing site conditions.
        - Submit any additional shop drawings or information as requested by the owner or owner's representative.
        - Shop drawings not reviewed shall be rejected
        - Maintain a record of all submittals and any review comments. A paper copy of submittal shall be kept on site and available for review by owner's representative or owner.
    - Provide a preliminary construction schedule with their bid.
    - Provide a revised construction schedule two weeks after project award.
    - Supply all personal protective equipment (PPE) and consumable supplies as required to meet all applicable legislation, ONTC policies and Contractor Policies. Note: Safety glasses with side shields, safety boots, hard hats, and high visibility clothing must be worn at all times on ONTC property. Any employees not wearing the required PPE will be immediately escorted off ONTC property.
    - Designate a site supervisor who will be responsible for managing the project and be responsible for on-site safety, including all sub-contractors and suppliers. This site supervisor will be the single point of contact for the duration of the project. This site supervisor will be required to communicate with ONTC supervision to ensure the work is completed safely with minimal impact on the operation of the facility.
    - Coordinate required site inspections with independent inspection and testing firms.
    - Purchase and deliver to the site all Contractor supplied materials, equipment, facilities, and manpower necessary to accomplish the work within the schedule.

- Establish a site-use plan acceptable to ONTC providing an organized, safe, and efficient means of personnel transport, material handling, storage/laydown areas, construction trailer locations, access points and methods of access, and limits of construction within the premises.
- Receive, unload, store, protect, secure, and transport within the jobsite all Contractor and ONTC furnished equipment and materials.
- Provide on-site and off-site quality control services as required in specifications, drawings and documents.
- Maintain complete records including daily construction site diary/log book, shop drawings, and pertinent photographs.
- Provide qualified personnel to perform the work.
- Ensure that the project is started and completed on schedule.
- Make every reasonable effort to contain any dust or fumes so that adjacent work areas are not contaminated during the project.
- Clean up and demobilize areas upon completion of the work.
- Supply all necessary tools, machinery, and equipment to perform the work including, but not limited to, forklifts, mobile cranes, hoisting equipment, scaffolding, ladders, man lifts, temporary lighting, heating, welding machines, ventilation, consumables, and any other material or equipment required to complete the work. The Contractor shall provide all necessary vehicles and qualified personnel to transport people and materials.
- Be aware of all high voltage equipment in the building. Be familiar with proper equipment shut down procedures and follow “Lock Out and Tag Out” procedures. Understand the effect on light sources for work involving power outages, and be responsible for temporary light sources required to complete their work safely.
